

# Mixtures, Solubility, and Acid/Base Solutions

## Substances and Mixtures

### ..... Before You Read .....

**What do you think?** Read the two statements below and decide whether you agree or disagree with them. Place an A in the Before column if you agree with the statement or a D if you disagree. After you've read this lesson, reread the statements to see if you have changed your mind.

| Before | Statement                                                             | After |
|--------|-----------------------------------------------------------------------|-------|
|        | 1. You can identify a mixture by looking at it without magnification. |       |
|        | 2. A solution is another name for a homogeneous mixture.              |       |

### ..... Read to Learn .....

## Matter: Substances and Mixtures

Many different types of matter exist around you. On your way to school, you might see metal, plastic, rocks, concrete, plants, fabric, water, and skin. You might notice that you can group some types of matter together into one category. For example, keys, coins, and paper clips are made of metal. Grouping matter into categories helps you understand how some things are similar to each other, but different from other things. Nearly all types of matter can be sorted into just two major categories—substances and mixtures.

### What is a substance?

A **substance** is matter that is always made up of the same combination of atoms. There are two types of substances—elements and compounds. Recall that an element is matter made of only one type of atom, such as carbon (C), oxygen ( $O_2$ ), and chlorine ( $Cl_2$ ). A compound is matter made of atoms of two or more elements that are chemically bonded together. For example, water ( $H_2O$ ) always contains two atoms of hydrogen bonded to one atom of oxygen. Table salt ( $NaCl$ ) always contains one atom of sodium bonded to one atom of chlorine. The composition of elements and compounds doesn't change. Therefore, all elements and compounds are substances. 🔍

### Key Concepts 🔑

- How do substances and mixtures differ?
- How do solutions compare and contrast with heterogeneous mixtures?
- In what three ways do compounds differ from mixtures?

### Study Coach

**Make a Table** with two columns to contrast substances and mixtures. Label one column *Substances* and the other column *Mixtures*. Complete the table as you read this lesson.

### ✓ Reading Check

**1. Analyze** Is table salt an element or a compound? Explain.
