Introduction

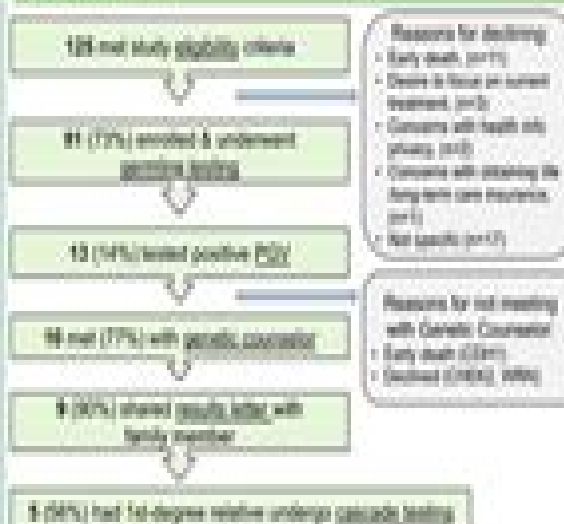

- Identification of pathogenic germline variants (PGVs) is important for patients with advanced cancer: guiding treatment decisions, cancer screening, and testing of family members.
- Despite this, barriers to testing still exist.
- Streamlined processes for genetic testing are needed.
- We assessed the feasibility of a novel genetic counseling/testing approach:
 - Genetic testing with written education was performed.
 - Genetic counseling *only* for those testing positive.

- Patients and providers report high satisfaction with this process that removes known barriers to testing, such as extra clinic visits.
- Increased rates of cascade testing were clinically meaningful compared to current published rates.
- Further use of this process will require delivering education to patients prior to testing and ensuring that providers are comfortable ordering testing.
