

Pre-Lab Information

Purpose	Experimentally observe how an object's position and velocity change while it is moving with a constant acceleration.
Time	Approximately 50 minutes
Question	How does an object's position and velocity change as the object accelerates?
Hypothesis	If the fan speed increases, then the acceleration of the cart increases, because a greater fan speed supplies more energy to move the cart.
Variables	<i>Independent Variable:</i> fan speed <i>Dependent Variable:</i> acceleration of the cart <i>Constant:</i> mass
Summary	You will use a simulation to measure the position and velocity of a cart as it accelerates along a frictionless surface. Complete three trials using three different fan speeds to move the cart and generate data, and then calculate the average velocity of the cart for each of the three fan speeds. You will also determine the acceleration of the cart from a graph of Velocity vs. Time. Finally, run one more trial in which the acceleration will be removed halfway through the run to interpret how velocity changes. Please note that this simulation uses the term "speed" instead of "velocity." This is because the cart moves only in one direction. For the purposes of this lab, the terms speed and velocity are interchangeable.

Lab Procedure

Step 1: Open the simulation.

- Be sure to follow all the directions provided in the lab guide as well as on screen during the virtual lab.
- Open the Gizmo "Force and Fan Carts" link in the virtual lab and watch the demo by clicking the demo icon at the bottom-left corner of the activity.
- When the demo is complete, close it and return to the Experiment setup.
