the remarkable array of adaptations that species have perfected over millennia With the climate crisis escalating biomimicry
is no longer just an inspiration it is an imperative It recognises that we are nature and rather than viewing the living world as

full potential This must change Nature holds the key to designing buildings and systems that can be net positive and show
that humans can become responsible stewards of planet Earth The adaptations that have evolved in the living world can
inspire radical game changing solutions self repairing structures air conditioned termite mounds and the extraordinary water
harvesting abilities of a desert beetle These innovations have been tested through 3 8 billion years of evolution offering
architects the chance to revolutionise the way we build and live Biomimicry in Architecture explores how nature s ingenuity
can transform everything from structural efficiency and material innovation to water conservation energy systems and even
the design of entire cities Featuring awe inspiring biological strategies this book presents urgent real world solutions for a
sustainable future Completely rewritten and updated with new content and illustrations this edition puts forward a
transformative case for biomimicry as a discipline that shows how to design as nature and integrate everything we do as
