*General Philosophy of Science: Focal Issues*, 2007-07-18 Scientists use concepts and principles that are partly specific for their subject matter but they also share part of them with colleagues working in different fields Compare the biological notion of a natural kind with the general notion of confirmation of a hypothesis by certain evidence Or compare the physical principle of the conservation of energy and the general principle of the unity of science Scientists agree that all such notions and principles aren't as crystal clear as one might wish An important task of the philosophy of the special sciences such as philosophy of physics of biology and of economics to mention only a few of the many flourishing examples is the clarification of such subject specific concepts and principles Similarly an important task of general philosophy of science is the clarification of concepts like confirmation and principles like the unity of science It is evident that clarification of concepts and principles only makes sense if one tries to do justice as much as possible to the actual use of these notions by scientists without however following this use slavishly That is occasionally a philosopher may have good reasons for suggesting to scientists that they should deviate from a standard use Frequently this amounts to a plea for differentiation in order to stop debates at cross purposes due to the conflation of different meanings While the special volumes of the series of Handbooks of the Philosophy of Science address topics relative to a specific discipline this general volume deals with focal issues of a general nature After an editorial introduction about the dominant method of clarifying concepts and principles in philosophy of science called explication the first five chapters deal with the following subjects Laws theories and research programs as units of empirical knowledge Theo Kuipers various past and contemporary perspectives on explanation Stathis Psillos the evaluation of theories in terms of their virtues Ilkka Niiniluoto and the role of experiments in the natural sciences notably physics and biology Allan Franklin and their role in the social sciences notably economics Wenceslao Gonzalez In the subsequent three chapters there is even more attention to various positions and methods that philosophers of science and

scientists may favor ontological epistemological and methodological positions James Ladyman reduction integration and the unity of science as aims in the sciences and the humanities William Bechtel and Andrew Hamilton and logical historical and computational approaches to the philosophy of science Atocha Aliseda and Donald Gillies The volume concludes with the much debated question of demarcating science from nonscience Martin Mahner and the rich European American history of the philosophy of science in the 20th century Friedrich Stadler Comprehensive coverage of the philosophy of science written by leading philosophers in this field Clear style of writing for an interdisciplinary audience No specific pre knowledge required
