Envisioning Architecture Eugenio Morello, Barbara E. A. Piga, 2013 *The licensing and usage of topic drop in German* Lisa Schäfer, 2025-06-10. This book is concerned with the licensing and usage of the elliptical construction topic drop in German. The term topic drop refers to the omission of the preverbal constituent in declarative verb second sentences for example the omission of the subject *ich* I in the sentence *Bin gleich zurück* Am right back. Topic drop exists in most of the Germanic verb second languages and typically occurs in spoken language and text types such as SMS chats, notes etc. While much of the previous research has focused on individual specific properties of topic drop often adopting a purely theoretical perspective, this book presents a systematic investigation of both the syntactic properties and usage conditions of topic drop based on empirical evidence from a corpus study and 12 acceptability rating studies. The first part of the book investigates the licensing of topic drop in particular its restriction to the preverbal prefield position. The results of four rating studies on topic drop in different prefield configurations lead to a refined prefield condition based on proposals by Rizzi 1994 and Freywald 2020 that is independent of topicality. Moreover, they inform the discussion on the most suitable syntactic analysis of topic drop supporting a PF deletion approach. The second part of the book presents and tests an information theoretic account of topic drop usage that builds on the Uniform Information Density hypothesis (Levy Jaeger 2007). In a corpus study and seven rating studies, several potential usage factors are investigated including grammatical person and verb predictability. The results provide initial evidence suggesting that topic drop usage can be explained by general processing principles. The prefield constituent is omitted when it is redundant and realized overtly when it facilitates the processing of the following verb. This information theoretic explanation is based on independently evidenced processing mechanisms, bundles isolated claims from the theoretical literature and allows for a unified analysis of topic drop with other types of ellipsis and reduction.
