

rocker adjusting screw will remain centered on the end of the valve stem.

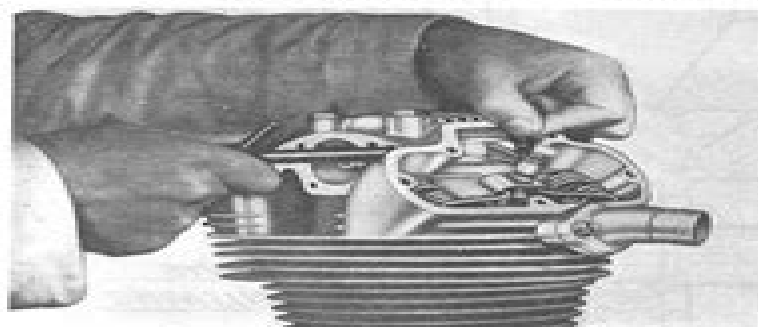

Fig. 92

Remove the pin and insert the rocker-pin taking care that its threaded cavity remains outside, so that it will be possible to pull the rocker-pin out if required.

Fig. 93

**NOTE!** - When fitting the rocker take care the adjusting screw touches the end of the valve with the flat and not the rounded part.

In the models 250 Mark 3 - Mach 1 and Scrambler, insert between the valve and the rocker, the adjusting cap (winkel cap).

Fit the cap with the bearings and related gasket; lock by means of four TCEI 6MA screws.

Tap lightly on the cap with a mallet and check the bevel drive.

Lock the camshaft securing nut by turning part of the washer under the nut, onto one of its flats.

Fit the Seeger ring on the end of bevel gear shaft at the lower end of the drive cover. (See Fig. 91, page 87. The Seeger ring can be fitted before the drive assembly is attached to the head. However, it is most important not to forget this ring, otherwise the consequences may be serious).

*ATTENTION: THE FLAT SURFACE OF THE SPRING MUST BE IN CONTACT AND FREE WITH THE VALVE.*

Fig. 94

### FITTING THE CYLINDER HEAD ON THE BARREL

At this point, if the previous instructions have been followed and the moving parts of the engine were not disturbed by rotation in either direction, all the gears are in proper position and the engine is correctly timed. At this point, the cylinder head can be fitted.

The system is timed when these marks are arranged as shown by the arrows in the following illustration.

Fig. 95

Adjustment screw of the gear change control fork
