It vividly illustrates the advantages of clinical and experimental methods, data-driven modeling, and physically based modeling, while also detailing the limitations of each approach. Blood, aqueous humor, vitreous humor, tear film, and cerebrospinal fluid each have a section dedicated to their anatomy and physiology, pathological conditions, imaging techniques, and mathematical modeling. Because each fluid receives a thorough analysis from experts in their respective fields, this volume stands out among the existing ophthalmology literature. *Ocular Fluid Dynamics* is ideal for current and future graduate students in applied mathematics and ophthalmology who wish to explore the field by investigating open questions, experimental technologies, and mathematical models. It will also be a valuable resource for researchers in mathematics, engineering, physics, computer science, chemistry, ophthalmology, and more.

In this volume, recognised experts discuss key current issues in the diagnosis and management of breast disease. The development and application of new diagnostic techniques is described, as well as the use of sophisticated drugs for more effective treatment. Complex, contentious topics including risk factors, borderline lesions, professional performance, and quality assurance are thoroughly explored by an expert multidisciplinary team. *Biodental Engineering II* R.M.
