

SLINKY AND SNAKY

PURPOSE: To observe some basic wave characteristics.

MATERIALS: Snaky spring, slinky spring, string, and stopwatch.

CAUTION: Do NOT let your extended slinky spring go. It will very likely get 'snagged' and you will be responsible for 'unsnagging' it or replacing it.

TRANSVERSE

LONGITUDINAL

PROCEDURE: (ANSWER ALL QUESTIONS IN COMPLETE SENTENCES!)

PART I - *In part I you will observe the difference between transverse and longitudinal waves.*

- A. Have your partner hold one end of the slinky and stretch it along a smooth floor until it is about 10 m long. Tie a short (15 cm) piece of string to one of the coils about one-third of the way down. Shake your end of the spring back-and-forth with one quick motion. This should produce a **pulse** that will travel down the spring. If you shake your hand back-and-forth in a regular oscillation, you will produce a **wave train**. You are now making a **transverse** wave.
1. Compare the direction of particle motion (represented by the piece of string) to the direction of wave travel in a transverse wave. (Use Slinky)
- B. Reach a short distance down the spring's length and gather the coils toward you and then quickly release them. The pulse that travels along the spring is a **longitudinal** pulse. (Section B works better with 'Snaky'.)
2. Compare the direction of particle motion (represented by the string) to the direction of wave motion in a longitudinal wave.

In PART II *you will observe how the amplitude and density affect the speed of a wave in a given medium.*

- C. In this part of the activity you will keep the length of the stretched spring constant. This will represent a given medium.
- Generate a transverse **pulse** in the coil. Measure the amount of time for the pulse to travel down and back. Now repeat the above motion but make it of larger or smaller amplitude (displacement). (Use Slinky)
