Subtraction With Regrouping Lesson Plans 2nd Grade:

Math Made a Bit Easier Lesson Plans Larry Zafran, 2010-01-19 This is the third book in the Math Made a Bit Easier series by independent math tutor Larry Zafran. It is a book of sixty lesson plans for tutors, parents, and homeschoolers. Each lesson plan includes all the components of a typical classroom lesson such as aim, motivation, warm up, exercises, demonstrative examples, questions for thought and discussion, and connections to earlier and later material. The math content in this book is directly aligned and ideally used in conjunction with the first book of the series and its companion workbook of practice exercises. It covers the topics which comprise the foundation of math, beginning with lessons in basic arithmetic followed by basic operations, negative numbers, fractions, decimals, percents, and basic probability and statistics. If these topics are not completely mastered, later work will prove to be quite difficult. This is especially true of algebra. The book includes a chapter on how to be an effective math tutor, as well as a chapter on how to optionally incorporate meditation instruction to help students get into a relaxed and alert state of mind, which is ideal for learning math and taking exams. Grade 2 Workbook we study regrouping in subtraction starting with two-digit numbers. First, students are taught to break 1

ten into 10 ones For example 5 tens 4 ones is written as 4 tens 14 ones one ten gets broken down into 10 ones This is the process of regrouping one of the tens changes groups from being with the tens to being with the ones After students have mastered that then it is time to use regrouping in subtraction problems and learn the traditional way of subtracting in columns the numbers are written under each other Then we study word problems with more and fewer and also several techniques or tricks for mental subtraction The word problems in the chapter require both addition and subtraction I do not like putting only subtraction word problems in a lesson that is about subtraction Students need to practice recognizing whether a problem requires addition or subtraction thus each set of word problems typically includes both kinds After this it is time to study regrouping in subtraction with three digit numbers There are three cases Regrouping 1 ten as 10 ones such as is needful for 546 229 Regrouping 1 hundred as 10 tens such as is needful for 728 441 Regrouping two times 1 ten as 10 ones and 1 hundred as 10 tens such as is needful for 725 448 Regrouping with zero tens such as is needful for 405 278 Here first we regroup 1 hundred as 10 tens then 1 ten as 10 ones In this workbook we ONLY study cases 1 and 2 from the list above Again students first practice the regrouping process with visual models You could use base ten blocks instead At the end of the workbook students encounter bar graphs again They also play Euclid s game which is meant as a fun supplemental lesson You may omit it if time does not allow

Regrouping in Addition Workbook Maria Miller,2016-01-01 Regrouping in Addition Workbook is ideal for second grade It deals with addition within 0 100 both mentally and in columns especially concentrating on regrouping in addition carrying Mental math Mental math is important because it builds number sense We study adding mentally a two digit number and a single digit number where the answer goes to the next ten problems such as 36 8 or 45 9 These additions use the helping problem composed of the single digit numbers 6 8 or 5 9 The child knows that 6 8 fills the first ten and is four more than the ten He she will learn to use that fact when adding 36 8 The sum 36 8 fills the next whole ten 40 and is four more than that or 44 Regrouping in tens We also study adding two digit numbers in columns and regrouping with tens or carrying which is illustrated and explained in detail with the help of visual models These visual models take the place of base ten blocks or other manipulatives You are welcome to use actual manipulatives if you prefer The main concept to understand is that 10 ones make a new ten and this new ten is regrouped with the other tens written using a little 1 in the tens column In order to prepare for adding three or four two digit numbers in columns we practice explicitly how to add 3 or 4 single digit numbers such as 7 8 6 4 and the principle of adding in parts such as 13 16 is the same as 10 10 and 3 6 The lessons also include lots of word problems review of even and odd numbers and occasional review problems about doubling Later on in the lesson Adding 3 Digit Numbers in Columns the student adds three digit numbers regrouping in tens but there is no regrouping in hundreds Students already know how to regroup two digit numbers so this lesson only extends that knowledge to numbers that have three digits In the next lesson students regroup ten tens as a hundred or carry to the hundreds This is first illustrated with visual models You can do the exercises that include visual models with manipulatives instead base ten blocks if you prefer Then we study regrouping twice 10 ones form a new ten and then 10 tens form a new hundred Again students work first with visual models with the aim of helping them to understand the concept itself Then they do the process with numbers only adding in columns
