

Geomorphology: Grade 11 Geography Summary

Geomorphology is the study of landforms, their processes, forms, and the landscapes they create. It involves understanding how natural forces shape the Earth's surface and change it over time.

1. Internal and External Earth Processes

- **Internal Processes (Endogenic Forces)**: These originate from within the Earth and shape landforms through tectonic activities.
 - **Tectonic Movements**: Include earthquakes, volcanic activity, and mountain building.
 - **Folding and Faulting**: Caused by tectonic forces; folding creates ridges and valleys, while faulting leads to fractures and displacement of rock layers.
- **External Processes (Exogenic Forces)**: Involve weathering, erosion, and deposition, driven by forces like water, wind, ice, and gravity.
 - **Weathering**: The breakdown of rocks at the Earth's surface into smaller particles, which can be physical, chemical, or biological.
 - **Erosion and Deposition**: Erosion transports weathered materials, while deposition occurs when these materials settle and accumulate.

2. Types of Landforms

- **Mountains**: Created by tectonic forces like folding, faulting, and volcanic activity.
- **Plateaus**: Elevated flat areas formed by uplift or lava flow.
- **Plains**: Large, flat areas resulting from sediment deposition over time.

Summary Of Geomorphology For Grade 11:

Dams and Geomorphology P.J. Beyer, 2005-12-19 Dams profoundly impact the geomorphology of rivers by altering the natural patterns of water sediment and energy flow in rivers These changes have a largely negative impact on aquatic and riparian ecosystems upstream and downstream of the dam Natural dams also impact river geomorphology although with positive and negative repercussions for aquatic and riparian organisms In 2002 the 33rd Binghamton Geomorphology Symposium convened under the theme Dams and Morphology and featured invited papers and contributed posters on topics of natural dams artificial dams and dam removal Fourteen of these papers have been included in this volume

Coastal Geomorphology Eric C. F. Bird, 2011-09-09 Coastal Geomorphology Second Edition is a comprehensive and systematic introduction to this subject and demonstrates the dynamic nature of coastal landforms providing a background for analytical planning and management strategies in coastal areas that are subject to continuing changes This introductory textbook has been completely revised and updated and is accompanied by a website which provides additional illustrations global examples case studies and more detailed and advanced information on topics referenced in the book together with explanations of terminology annotated references and research material
