Total Quality Management For Micro-businesses in the Manufacturing Industry
 Phillip Käser, 2010-06-28. Inhaltsangabe. Introduction. Total Quality Management (TQM) has already made its mark in history. Big players in major industries such as Ford and Siemens have already aligned their business and production processes to this holistic management concept. Over the past three decades, there are more medium-sized companies applying TQM principles to their business. Quality has been important in helping companies gaining a competitive edge in globalized markets. TQM with its extensive set of methods aims to embed quality awareness among all departments of a company where work affects the quality of the products. There are thousands of articles and books written on how large and medium-sized companies have successfully implemented TQM. An extensive literature review and interviews of experts and owners of very small businesses (micro businesses) indicate that this is the only industry where TQM systems have not yet been implemented. Although micro businesses are pressured by their customers to achieve high levels of quality in their products, there is not enough research that addresses the issues of implementing TQM practices for micro businesses. Scientific literature does not provide answers to crucial questions such as: What methods of quality management are currently being in use in micro businesses? How could a TQM system be tailored to meet the needs in a micro business environment? This thesis is part of a large-scale field study that recently has been launched by the Howe School of Technology Management at Stevens Institute of Technology, Hoboken, NJ. The study aims to reveal answers to the questions listed above. This thesis forms the foundation for the subsequent field study. The main goal is to deploy a systematic TQM framework for micro businesses that will help micro businesses understand how the quality management culture has an impact on a company's success. Additionally, this thesis aims to develop a questionnaire that will examine the validity of the framework and serve as basis for the field study. The focus is on very small manufacturers. First breakthroughs in quality management have been taken place in this industry. Thus, we can dispose of more than 100 years of research results in this field. Furthermore, it is the manufacturer who is used to the first-movers role in new quality management models. Another good reason for choosing this industry.
