A New Approach to Efficiently Automize & Manage Brushless DC Motor Using Pulse Width Modulation & Radio Frequency Muhammad Junaid, 2015-02-10 Scientific Essay from the year 2015 in the subject Engineering Power Engineering grade N A course Electrical Power Engineering language English abstract The aimed objective of this Research project is to control the speed and direction of brushless DC Direct Current motor through RF Radio Frequency module Microcontroller is the central part of this project which is controlling all the process i.e. checking for over current under over voltage and starting the auxiliary motor for load sharing in case of overloading etc If the motor is having under or over voltage problems then it will automatically be stopped to protect it from any damages The process of speed control will be done by PWM Pulse Width Modulation technique lastly an advantage feature kept is the direction control of this motor

Speed Control of Sensorless Brushless DC Motor MD Sabbir Ahmed, 2018-11-22 This book is all about running a brushless DC motor using a sensorless technique The target of the work was to make a very simple operating method for a brushless motor and formulate a speed control mechanism Initially the work was started with both considering back EMF and without considering back EMF Because of more complexity in the back EMF sensing method and as our intention was to make a simpler and cost effective operation so finally we assembled our project the without back EMF sensing Even though being a simple and inexpensive machine the performance was quite good However adding back EMF sensing in this machine

Rafael Carnicero Gómez,2004 DC Motor Control - A case study MOHAMMED ASLAM HUSAIN,2018-11-20 In this book the four quadrant speed control system for DC motor has been studied and constructed To achieve speed control an electronic technique called pulse width modulation is used which generates high and low pulses These pulses vary in the speed of the engine For the generation of these pulses a microcontroller is used It is a periodic change in the program Different speed grades and the direction are depended on different buttons The experiment has proved that this system is higher performance Speed control of a machine is the most vital and important part of any industrial organization This paper is designed to develop a four quad speed control system for a DC motor using microcontroller The engine is operated in four quadrants ie clockwise counterclockwise forward brake and reverse brake It also has a feature of speed control The four quadrant operation of the dc engine is best suited for industries where engines are used and as a requirement they can rotate in clockwise counter clockwise and thus apply brakes immediately in both the directions In the case of a specific operation in an industrial environment the engine needs to be stopped immediately In this scenario this system is very integral The PWM pulses generated by the microcontroller are instantaneous in both directions and as a result of applying the PWM pulses The microcontroller used in this project is from 8051 family Push buttons are provided for the operation of the motor which are interfaced to the microcontroller that provides an input signal to it and controls the speed of the engine through a motor driver IC The speed and direction of DC motor has been observed on digital CRO **Control and Simulation of Brushless D.C.
