Surface Coatings for Protection Against Wear B G Mellor, 2006-05-30 As wear is a surface or near surface phenomenon it has long been realised that the wear resistance of a component can be improved by providing a surface of different composition from the bulk material Although this book concentrates on surface coatings the distinction between surface coatings and the process of modifying the surface by changing its composition is not always clear so some useful surface modification techniques are also considered Surface coatings for protection against wear consists of twelve chapters written by different authors experts in their field After a brief introductory chapter wear phenomena and the properties required from a coating are addressed Chapter three covers coating characterisation and property evaluation relevant to wear resistance with an emphasis on mechanical testing of coatings The next chapter provides an introduction to the various methods available to deposit wear resistant coatings The following six chapters describe in detail wear resistant coatings produced by various deposition routes Emphasis is placed on the microstructure property relationship in these coatings Chapter eleven addresses coatings and hardfacings produced from welding processes specifically modern developments such as friction surfacing and pulsed electrode surfacing techniques The final chapter is dedicated to future trends in both coating materials and coating processes Surface coatings for protection against wear is essential for anyone involved in selecting coatings and processes and will be an invaluable reference resource for all engineers and students concerned with the latest developments in coatings technology Essential for anyone involved in selecting coatings and processes engineers and students Written by an international team of experts in the field

Advances in Subsea Pipeline Engineering and Technology C.P. Ellinas, 2012-12-06 Dr C P Ellinas Advanced Mechanics flexible pipelines pipeline design fabrication and installation deepwater applications Advances in North Sea technology over the last few years have been concerned mostly with marginal fields small diameter pipelines and new materials which are well covered in the first three topics Economic development of marginal fields requires processing of oil and gas to take place not at the wellhead but at existing facilities usually some distance away Hydrocarbons are thus often transported at high pressure and temperature in small diameter pipelines which need to be protected through trenching However such operational practice has brought to the fore a problem that in the past was of little concern namely upheaval buckling
