In recent years, the intelligentized techniques for robotic welding have a great development. The current teaching play-back welding robot is not with real-time functions for sensing and adaptive control of weld process. Generally, the key technologies on intelligentized welding robot and robotic welding process include computer vision and other information sensing, monitoring, and real-time feedback control of weld penetration and pool shape, and welding quality. Seam tracking is another key technology for

welding robot system Some applications on intelligentized robotic welding technology is also described in this book it shows a great potential and promising prospect of artificial intelligent technologies in the welding manufacturing
