Conceptual Modelling in Information Systems Engineering John Krogstie, Andreas Lothe Opdahl, Sjaak Brinkkemper, 2007-06-13 Conceptual modeling has always been one of the cornerstones for information systems engineering as it describes the general knowledge of the system in the so called conceptual schema Krogstie Opdahl and Brinkkemper compiled 20 contributions from renowned researchers covering all aspects of conceptual modeling on the occasion of Arne S. Iyberg's 67th birthday Many friends of this information systems modeling pioneer happily contributed their latest research results from fields like data modeling goal oriented modeling agent oriented modeling and process oriented modeling Overall the contributions reflect the most important developments and application areas of conceptual modeling in recent years and they also pinpoint trends in conceptual modeling for the next decade This wide selection corresponds to the broad spectrum of Arne's activities and long term responsibilities with the VLDB Endowment IFIP and ERCIM Arne was presented with this book at CAiSE 2007 when the event which he cofounded in 1989 returned to his hometown of Trondheim

Systematic Transformation Method from UML to Event-B Zou Sheng-Rong, Geng Xue, Yao Ju-Yi, Liu Xiao-Ying, Zhi Yu-Hua, 2024-06-05 Since the emergence of software engineering in the late 1960s requirements analysis has always been an important theme of software development In the process of software development many people are needed to cooperate to ensure the stability and reliability of the software According to the degree of formalization in the software development process software engineering methods can be divided into three types non formal semi formal and formal In object oriented software development UML has become a de facto modeling standard However although UML is intuitive and easy to understand and apply it has inaccurate semantics and UML is a semi formal modeling language that cannot be formally verified Event B is a formal method based on a large number of mathematical predicate logic which is accurate but difficult to understand and apply Therefore how to combine the advantages of UML diagrams and Event B methods is the focus of research
