Building Web Applications with UML Jim Conallen, 2003 Conallen introduces architects and designers and client server systems to issues and techniques of developing software for the Web. He expects readers to be familiar with object oriented principles and concepts particularly with UML unified modeling language and at least one Web application architecture or environment. The second edition incorporates both technical developments and his experience since 1999. He does not provide a bibliography. Annotation copyrighted by Book News Inc. Portland OR. Enterprise Information Systems Joaquim Filipe, José Cordeiro, 2009-04-03 This book contains the best papers of the 10th International Conference on Enterprise Information Systems ICEIS 2008 held in the city of Barcelona Spain organized by the Institute for Systems and Technologies of Information Control and Communication INSTICC in cooperation with AAAI and co sponsored by WfMC. ICEIS has become a major point of contact between research scientists, engineers and practitioners in the area of business applications of information systems. This year five simultaneous tracks were held covering different aspects related to enterprise computing including Databases and Information Systems, Integration, Artificial Intelligence and Decision Support Systems, Information Systems Analysis and Specification, Software Agents and Internet Computing and Human Computer Interaction. All tracks focused on real world applications and highlighted the benefits of information systems and technology for industry and services thus making a bridge between academia and enterprise. Following the success of 2007 ICEIS 2008 received 665 paper submissions from more than 40 countries. In all 62 papers were published and presented as full papers i.e. completed work 8 pages in proceedings, 30 min oral presentations and 183 papers reflecting work in progress or position papers were accepted for short presentation and another 161 for poster presentation. *On the Move to Meaningful Internet Systems: OTM 2009 Workshops* Robert Meersman, Pilar Herrero, Tharam Dillon, 2009-10-26 Internet based information systems the second covering the large scale integration of heterogeneous computing systems and data resources with the aim of providing a global computing space. Each of these four conferences encourages researchers to treat their respective topics within a framework that incorporates jointly a theory, b conceptual design and development and c applications in particular case studies and industrial solutions. Following and expanding the model created in 2003 we again solicited and selected quality workshop proposals to complement the more archival nature of the main conferences with research results in a number of selected and more avant garde areas related to the general topic of Web based distributed computing. For instance the so called Semantic Web has given rise to several novel research areas combining linguistics, information systems technology and artificial intelligence such as the modeling of legal regulatory systems and the ubiquitous nature of their usage. We were glad to see that ten of our earlier successful workshops ADI, CAMS, EI2N, SWWS, ORM, OnToContent, MONET, SEMELS, COMBEK, IWSSA re appeared in 2008 with a second, third or even fifth edition sometimes by alliance with other newly emerging workshops and that no fewer than three brand new independent workshops could be selected from proposals and hosted
