Limit Cinema Chelsea Birks, 2021-07-15 WINNER of the Society for Cinema and Media Studies SCMS Best First Book Award 2023 Limit Cinema explores how contemporary global cinema represents the relationship between humans and nature During the 21st century this relationship has become increasingly fraught due to proliferating social and environmental crises recent films from Lars von Trier's Melancholia 2011 to Apichatpong Weerasethakul's Uncle Boonmee Who Can Recall His Past Lives 2010 address these problems by reflecting or renegotiating the terms of our engagement with the natural world In this spirit this book proposes a new film philosophy for the Anthropocene It argues that certain contemporary films attempt to transgress the limits of human experience and that such limit cinema has the potential to help us rethink our relationship with nature Posing a new and timely alternative to the process philosophies that have become orthodox in the fields of film philosophy and ecocriticism Limit Cinema revitalizes the philosophy of Georges Bataille and puts forward a new reading of his notion of transgression in the context of our current environmental crisis To that end Limit Cinema brings Bataille into conversation with more recent discussions in the humanities that seek less anthropocentric modes of thought including posthumanism

speculative realism and other theories associated with the nonhuman turn The problems at stake are global in scale and the book therefore engages with cinema from a range of national and cultural contexts From Ben Wheatley's psychological thrillers to Nettie Wild's eco documentaries limit cinema pushes against the boundaries of thought and encourages an ethical engagement with perspectives beyond the human

The Sleepwalkers Arthur Koestler, 2017-02-23 Arthur Koestler's extraordinary history of humanity's changing vision of the universe In this masterly synthesis Arthur Koestler cuts through the sterile distinction between sciences and humanities to bring to life the whole history of cosmology from the Babylonians to Newton He shows how the tragic split between science and religion arose and how in particular the modern world view replaced the medieval world view in the scientific revolution of the seventeenth century He also provides vivid and judicious pen portraits of a string of great scientists and makes clear the role that political bias and unconscious prejudice played in their creativity

Hadean Earth T. Mark Harrison, 2020-06-18 This book consolidates the latest research on the Hadean Eon the first 500 million years of Earth history which has permitted hypotheses of early Earth evolution to be tested including geophysical models that include the possibility of plate tectonic like behavior These new observations challenge the longstanding Hadean paradigm based on no observational evidence of a desiccated lifeless continent free wasteland in which surface petrogenesis was largely due to extraterrestrial impacts The eon was termed Hadean to reflect such a hellish environment That view began to be challenged in 2001 as results of geochemical analyses of greater than 4 billion year old zircons from Australia emerged These data were consistent with the zircons forming in a world much more similar to today than long thought and interpreted to indicate that sediment cycling was occurring in the presence of liquid water This new view leaves open the possibility that life could have emerged shortly after Earth accretion The epistemic limitations under

which the old paradigm persisted are closely examined The book is principally designed as a monograph but has the potential to be used as a text for advanced graduate courses on early Earth evolution **An Explorer's Guide to the Earth System** Ellen Metzger,2003 This book provides readers with an Earth system perspective and engages them in active learning and inquiry about their home planet It contains readings questions and exercises that will cultivate a greater appreciation for the planet Earth and its inhabitants and demonstrate how relevant Earth Science is to our lives and communities Recurring themes interactions of spheres scale cycles energy humans and the earth system are woven throughout the five chapters which cover an introduction to the earth system geosphere hydrosphere atmosphere and cosmosphere For anyone who wants to explore the science of the Earth **Geyser Park Wonders** Raina Mooncrest, AI, 2025-02-21 Geyser Park Wonders explores the fascinating world of geothermal areas revealing the science behind geysers hot springs and the unique ecosystems they support These dynamic landscapes offer a glimpse into Earth's internal processes shaped by volcanic activity and tectonic forces One intriguing fact is the existence of extremophiles microbial life thriving in extreme heat and chemical conditions offering clues about the origins of life itself The book delves into the geological history of these areas explaining how magma plumes and groundwater systems interact It also examines the delicate balance of these ecosystems showcasing the importance of understanding geochemistry and hydrology to preserve these natural wonders The book further explores the history of scientific exploration and the potential for geothermal energy Beginning with the fundamental concepts of geothermal activity the book progresses through the history of scientific investigation the unique microbial communities and the management and preservation of these environments It concludes by discussing the implications of geothermal research for climate change energy production and the search for life beyond Earth making it a valuable resource for anyone interested in Earth Sciences and environmental science **Exploring Planet Earth**, 1997 **The Climate Solutions Consensus** National Council for Science and the Environment, 2012-06-22 In 2007 the Intergovernmental Panel on Climate Change shared the 2007 Nobel Peace Prize with former Vice President Al Gore for its reporting on the human causes of climate change In 2008 the National Council for Science and the Environment reported that the acceleration of climate change is already faster than the IPCC projected only a year earlier How we deal with the rapid environmental changes and the human forces that are driving these changes will be among the defining issues of our generation Climate Solutions Consensus presents an agenda for America It is the first major consensus statement by the nation's leading scientists and it provides specific recommendations for federal policies for state and local governments for businesses and for colleges and universities that are preparing future generations who will be dealing with a radically changed climate The book draws upon the recommendations developed by more than 1200 scientists educators and decision makers who participated in the National Council for Science and the Environment's 8th National Conference on Science Policy and the Environment After presenting a lucid narrative of the science behind climate change and its solutions Climate

Solutions Consensus presents 35 practical results oriented approaches for minimizing climate change and its impacts It clearly spells out options for technological societal and policy actions And it deals head on with controversial topics including nuclear energy ocean fertilization and atmospheric geo engineering One of the book s key conclusions is that climate solutions are about much more than energy sources They involve re examining everything people do with an eye toward minimizing climate impacts This includes our eating habits consumption patterns transportation building and housing forestry land use education and more According to these scientists the time to act is now With clarity and urgency they tell us exactly what needs to be done to start reversing the driving factors behind climate change minimizing their consequences and adapting to what is beyond our power to stop
