

<<1.2/4.2.2.d>>

The quality management system shall be relevant to the nature of our organization and products, and to customer and regulatory requirements. For this reason, those requirements of ISO 9001 (2008) that do not apply are excluded from the scope of our quality system.

Following rules and criteria are used for excluding irrelevant requirements:

1. An ISO 9001 (2008) requirement may be excluded only when both of the following conditions are met:
 - The requirement must be within ISO 9001 Clause 7, Product Realization; and
 - The exclusion may not affect our ability, nor absolve us from the responsibility, to provide product that meets customer and applicable regulatory requirements.
2. The Quality Assurance Manager is responsible for identifying those requirements of ISO 9001 that do not apply to our organization or products, and to propose exclusions of such requirements from the scope of the quality system.
3. Top executive management has the responsibility and authority for evaluating whether the proposed exclusions are appropriate, and for approving them. Evaluation and approval of exclusions are conducted within the framework of management reviews of the quality system (refer to Operational Procedure 05-06-01, Management Review).
4. Any exclusions taken are documented in this section of the quality manual. The excluded requirements are precisely identified with reference to specific clauses and/or statements in the standard. There is also a brief justification why the exclusion is taken and why it is appropriate.

Small Machine Shop Quality Manual

D. E. Hardt

Small Machine Shop Quality Manual:

ISO 9001:2000 Quality Management System Design Jay J. Schlickman, 2003 Provides a set of design rules for creating a quality management system that will naturally translate into successful ISO 9001 2000 certification The book identifies the key documentation components and supplies guidelines for outlining and writing the quality manual standard operating procedures work instructions forms and records Two case studies illustrate the upgrade and recertification of a corporation from ISO 9001 1994 to ISO 9001 2000 and the creation of a company's first quality management system The author is an auditor certified by the ASQ ANSI registrar accreditation board Annotation copyrighted by Book News Inc Portland OR

Tool and Manufacturing Engineers Handbook: Design for Manufacturability Thomas J. Drozda, Charles Wick, Philip Mitchell, Ramon Bakerjian, John T. Benedict, Raymond F. Veilleux, 1983 Addresses important topics of DFM including how it relates to concurrent engineering management issues getting started in DFM how to justify using DFM applying quality tools and how DFM is affecting computer technology and vice versa Covers topics starting with the creative thinking process to combining DFM with geometric dimensioning and tolerancing Also includes product design information that designers should know when committing pen to paper or mouse to mat

Information Control Problems in Manufacturing Technology 1982 D. E. Hardt, 2014-05-17 Information Control Problems in Manufacturing Technology 1982 documents the proceedings of the 4th IFAC IFIP Symposium held in Maryland USA on 26-28 October 1982 The volume contains 27 papers divided into six sections The papers in Section 1 cover the various US government programs sponsoring manufacturing related research This support ranges from basic process physics research to general questions of artificial intelligence in the manufacturing environment At the heart of any manufacturing operation are the unit processes Proper control of these processes is vital to achieving the autonomy that will eventually lead to automated manufacturing systems Section 2 addresses these issues in terms of the general control problem involved and in the solution of specific processing problems Section 3 presents examples of both on and off line techniques that use novel methods of data acquisition and signal processing Section 4 focuses on the role of industrial robots in advanced manufacturing systems It addresses fundamental questions of manipulator design and control and modelling of robot work environment The ability to integrate processes and robots into an efficient manufacturing system is truly the challenge of the future Section 5 deals with a wide range of such problems including planning scheduling inventory and decision systems Section 6 presents specific examples of fully automated manufacturing and assembly systems
