Investors' Manual, 1909 *Blockchain Technology in the Automotive Industry* Ghulam Yasin, Amit Kumar Tyagi, Tuan Anh Nguyen, 2024-10-30. Nowadays the latest technologies can be found not only in healthcare and space application but also in hybrid supercars. Supercars and hypercars require high performance materials with high strength, high stiffness and light weight. For higher performance car engines now become stronger but smaller and with lower fuel consumption with cleaner exhaust. Currently the automotive industry involves batch production but in the near future personalized and individualized automobiles with low and limited quantities can be fabricated in smart factories which integrate all companies working in the supply chain from manufacturing to marketing and services. In this regard future automobiles in smart cities become more personalized, single user limited version, personal spare parts, safer and smarter. Blockchain technology is the key to these future perspectives toward intelligent automobiles without any risk of safety, accident, security, theft or traffic jam. In the current industry blockchain technology can explore the interconnection of blockchain with other innovative technologies and trends such as the Internet of Things (IoT) and artificial intelligence (AI) and analyzes the potential to transform business processes and whole industries if these innovations are applied jointly. In the case of the manufacturing sector, manufacturing can provide a high return on investment. It was reported that 1 of investment in manufacturing can create 2.5 of economic activity. In addition, smart products should be fabricated from smart materials via the intelligent manufacturing system framework. In smart production if the products and machines are integrated, embedded or otherwise equipped with smart sensors and devices, the system can immediately collect the current operating parameters and predict the product quality and then communicate the optimal parameters to machines in the production line. For smart city applications, the global smart cities market size is expected to grow from USD 410.8 billion in 2020 to USD 820.7 billion by 2025 at a compound annual growth rate (CAGR) of 14.8%. For smart city applications, blockchain technology can build on decentralization, immutability and consensus characteristics. Additionally, intelligent wireless sensor networks can provide big information to monitor and manage the city's regular operations and services including traffic and transportation systems, street lighting systems, power plants, water supply networks, waste management, libraries, hospitals, schools, universities etc. A blockchain based distributed framework can be used for automobiles in the smart city. This framework can include a novel miner node selection algorithm for the blockchain based distributed network architecture. This book explores how blockchain technology can be used in the automotive industry from smart manufacturing to the smart city.
