

BENEFITS OF A SMART METER

ComEd is installing approximately 4 million smart meters in all homes and businesses across its northern Illinois service territory by the end of 2018. Because a smart meter provides you access to more information on your electricity usage, you will be able to see how much electricity you use and make simple changes that can save you money on your electric bill.

Once you receive a smart meter, you can create or log into your ComEd online account at ComEd.com/MyAccount (have your account number handy) to access daily and hourly usage information to help guide your energy-saving efforts.

To better manage electricity usage and costs, you can view projections of the total electricity usage that you can expect to see on your electric bill. These projections are based on your current usage patterns. You can also sign up for usage alerts and receive a phone call or email when your usage is trending higher than normal for your household.

HOW TO READ A METER'S DATA DISPLAYS

A smart meter displays up to six sets of data. Each data set appears on the smart meter's LCD display, then starts again at the beginning once it completes a cycle. This data is used by ComEd for billing and operational purposes.

Display Test

The first display will show "888.8.8.8". This indicates the LCD display is working properly.

Electricity Inflow

This display shows the cumulative amount of electricity delivered to your home, in kilowatt-hours (kWh), from the time the meter was installed. This meter reads 298 kWh. Below the reading is an arrow on the display pointing to the right. This indicates electricity delivered to your home.

Smart Metering Applications Nikolaos Efkarpidis, Martin Geidl, Holger Wache, Marco Peter, Marc Adam, 2022-10-03 This book presents a large number of smart metering applications from the points of view of different stakeholders. The applications are clustered with respect to three types of stakeholders: a end customers, b energy service providers and c authorities, research institutions or other organizations. The goal of the book is to examine the implementation potential for each application, considering the interests and benefits for the key stakeholders, main technical and regulatory requirements, as well as limitations and barriers. A business case for each application is created that can provide guidelines to the stakeholders involved in its realization. The book additionally investigates current business models for smart metering applications. A survey on the current techno-economic potential of such applications is conducted based on a questionnaire filled by various stakeholders. The book will be of interest to academic research institutions but also engineers in industry, authorities or other organizations.
