The causes and effects of smoking among students

Smoking is one of the most dangerous widespread phenomena that threaten lives of a huge number of people worldwide. It starts as a way of having fun, but ends as an addiction that is therefore so difficult to give up. Today, we often hear of “smoking among students”. So why do students smoke and what are the effects that smoking has on them?

There are many reasons behind the phenomenon of smoking among students. To start with, students smoke because they are curious and want to discover the world of those who smoke. They are just trying to have some fun when they smoke the first cigarette. Other students take up smoking due to the family problems, especially when they see their parents having quarrels. Moreover, some students smoke since they think a cigarette would relieve stress they had during the day, especially at school. Last but not least, students try to imitate adult smokers because they want to show that they are adults, too.

If we look at the consequences of smoking, we will find so many. Smoking causes cancer. As a result, the addict students would suffer from health problems that end in death. Another effect is that after certain years, the addict would develop respiratory problems and will face a lot of problems in running without losing breath. So, asthma, bronchitis, and emphysema are always a lingering threat. One more important effect of smoking is that it causes a lot of anger for the addict. Whenever they lack cigarettes, they start reacting angrily and strangely.

To sum up, smoking is an ongoing threatening danger for addicts and might affect the next generation. The best solution is prevention according to the proverb that says “Prevention is better than cure”.

Coal-dust Explosions in Mines: Causes, Effects, and Recommendations for Prevention ... George Samuel Rice,1929 Hyping Health Risks Geoffrey C. Kabat,2008-07-03 The media constantly bombard us with news of health hazards lurking in our everyday lives but many of these hazards turn out to have been greatly overblown According to author and epidemiologist Geoffrey C Kabat this hyping of low level environmental hazards leads to needless anxiety and confusion on the part of the public concerning which exposures have important effects on health and which are likely to have minimal or no effect Kabat approaches health scares as social facts and shows that a variety of factors can contribute to the inflating of a hazard These include skewed reporting by the media but also surprisingly the actions of researchers who may emphasize certain findings while ignoring others regulatory and health agencies eager to show their responsiveness to the health

concerns of the public and politicians and advocates with a stake in a particular outcome By means of four case studies Kabat demonstrates how a powerful confluence of interests can lead to overstating or distorting the scientific evidence He considers the health risks of pollutants such as DDT as a cause of breast cancer electromagnetic fields from power lines radon within residences and secondhand tobacco smoke Tracing the trajectory of each of these hazards from its initial emergence to the present Kabat shows how publication of more rigorous studies and critical assessments ultimately help put hazards in perspective
