Good Laboratory Practice Jürg P. Seiler, 2012-12-06 After more than twenty years of use Good Laboratory Practice or GLP has attained a secure place in the world of testing chemicals and other test items with regard to their safety for humans and the environment Gone are the days when the GLP regulations were hotly debated amongst scientists in academia and industry and were accused of stifling flexibility in imaginative approaches to and science based conduct of all kinds of studies concerned with toxic effects and other parameters important for the evaluation and assessment of products submitted for registration and permission to market The GLP regulations have developed from rules on how to exactly document the planning conduct and reporting of toxicity studies to a quality system for the management of a multitude of study types from the simple determination of a physical chemical parameter to the most complex field tests or ecotoxicology studies At the same time the term Good Laboratory Practice has become somewhat of a slogan with the aim to characterise any reliably conducted laboratory work

Pesticide residues in food - 2019 Evaluation: Part II, Toxicological Food and Agriculture Organization of the United Nations, World Health Organization, 2021-09-06 A Joint Meeting of the Food and Agriculture Organization of the United Nations FAO Panel of experts on Pesticide Residues in Food and the Environment and the World Health Organization WHO Core assessment Group on Pesticide Residues JMPR was held in Geneva Switzerland from 17 to 26 September 2019 The FAO Panel Members met in preparatory sessions from 12 to 16 September The Meeting evaluated 30 pesticides including eight new compounds and three compounds that were re evaluated for toxicity or residues or both within the periodic review programme of the Codex Committee on Pesticide Residues CCPR The Meeting established ADIs and ARfDs estimated maximum residue levels and recommended them for use by CCPR and estimated supervised trials median residue STMR and highest residue HR levels as a basis for estimating dietary exposures The Meeting also estimated the dietary exposures both acute and long term to the pesticides reviewed and on this basis performed a dietary risk assessment in relation to the relevant ADI and where necessary the ARfD Cases in which ADIs or ARfDs may be exceeded if they occur are clearly indicated in order to facilitate the decision making process by CCPR The Meeting considered a number of general issues addressing procedures for the evaluation and risk assessment of pesticide residues

Drug Discovery and Evaluation: Safety and Pharmacokinetic Assays Franz J. Hock, Michael K. Pugsley, 2024-10-21 Many aspects of drug safety have become an outstanding and even persistent issue and may occur during the process of both drug discovery and

development Until 15 years ago drug discovery and evaluation was primarily a sequential process starting with the selection of the most pharmacologically active compound from a series of newly synthesized small molecule chemical series by means of distinctive pharmacological assays Safety aspects were addressed by evaluation of the selected compound at high doses in a series of specific studies directed at indications other than the intended indication of the new compound These tests are then followed by pharmacokinetic studies which are primarily conducted to confirm whether the selected compound possesses a suitable half life for sufficient exposure and efficacy and whether it has the desired properties specificity to the intended route of administration Safety aspects relied predominantly on the conduct of single and repeat toxicology dose studies which inform changes in organ structure rather than organ function Both toxicological and pharmacokinetic studies are adapted to the progress of studies in clinical pharmacology and clinical trials The new edition of this well and broadly accepted reference work contains several innovative and distinguished chapters This sequential strategy has been abandoned with this new version of the book for several reasons Of the possible multitude of negative effects that novel drugs may impart on organ function e g ventricular tachy arrhythmia many are detected too late in non clinical studies to inform clinicians On the other hand negative findings in chronic toxicity studies in animals may turn out to be irrelevant for human beings New scientific approaches e g high throughput screening human pluripotent stem cells transgenic animals knock out animals in silico models pharmaco genomics and pharmaco proteomics as well as Artificial Intelligence AI methods offered new possibilities There are several examples that show that the druggability of compounds was considerably underestimated when the probability of success of a new project was assessed The success rate in the pharmaceutical industry and the introduction of new chemical entities to the market per year dropped dramatically whereas the development time for a new compound increased sometimes exceeding the patent protection Research and development scientists involving the following changes therefore adopted a change of strategy Parallel instead of sequential involvement of the various disciplines multidimensional compound optimization The term Safety Pharmacology was coined The International Conference on Harmonization ICH founded a Safety Pharmacology Working Group and the Safety Pharmacology Society SPS was launched The discipline provided for evaluation development and validation of a multitude of safety tests outlined in the Core Battery of Studies Characterizing the exposure profile of a drug by conducting pharmacokinetic studies that evaluates the absorption distribution metabolism and excretion should to be investigated at an early stage of development as results contribute to the selection of a compound for further development Advancements in Toxicology were achieved by the introduction of new methods e g in silico methods genetic toxicology computational toxicology and AI The book is a landmark in the continuously changing world of drug research and developments As such it is essential reading for many groups not only for all students of pharmacology and toxicology but also for industry scientists and physicians especially those involved in clinical trials of drugs and for pharmacists who must know the safety requirements of drugs The book is essential for

scientists and managers in the pharmaceutical industry who are involved in drug discovery drug development and decision making in the development process In particular the book will be of use to government institutions and committees working on official guidelines for drug evaluation worldwide Pesticide residues in food 2022 - Evaluations - Part II - Toxicological Food and Agriculture Organization of the United Nations,World Health Organization,2024-05-23 A Joint Meeting of the Food and Agriculture Organization of the United Nations FAO Panel of experts on Pesticide Residues in Food and the Environment and the World Health Organization WHO Core assessment Group on Pesticide Residues JMPR was held in Rome Switzerland from 12 to 22 September 2019 Author The FAO Panel Members met in preparatory sessions from 8 to 12 September Author
