Zpl Programming Guide Volume Two:

A Programmer's Guide to ZPL Lawrence Snyder, 1999 ZPL is a new array programming language for science and engineering computation. Designed for fast execution on both sequential and parallel computers, it is intended to replace languages such as Fortran and C. This guide provides a complete introduction to ZPL. It assumes that the reader is experienced with an imperative language such as C, Fortran, or Pascal. Though precise and thorough, it does not attempt to be a complete reference manual but rather illustrates typical ZPL usage and explains in an intuitive manner how the constructs work. The emphasis is on teaching the reader to be a ZPL programmer. Scientific computations are used as examples throughout, and a list of common features is printed on the inside back cover for easy reference.

Parallel and Distributed Processing Jose Rolim, 2000-04-19 This volume contains the proceedings from the workshops held in conjunction with the IEEE International Parallel and Distributed Processing Symposium IPDPS 2000 on 15 May 2000 in Cancun, Mexico. The workshops provide a forum for bringing together researchers, practitioners, and designers from various backgrounds to discuss the state of the art in parallelism. They focus on different aspects of parallelism: from runtime systems to formal methods, from optics to irregular problems, from biology to networks of personal computers, from embedded systems to programming environments. The following workshops are represented in this volume: Workshop on Personal Computer Based Networks of Workstations, Workshop on Advances in Parallel and Distributed Computational Models, Workshop on Parallel and Distributed Computing in Image, Video, and Multimedia, Workshop on High Level Parallel Programming Models and Supportive Environment, Workshop on High Performance Data Mining, Workshop on Solving Irregularly Structured Problems in Parallel, Workshop on Java for Parallel and Distributed Computing, Workshop on Biologically Inspired Solutions to Parallel Processing Problems, Workshop on Parallel and Distributed Real Time Systems, Workshop on Embedded HPC Systems and Applications, Reconfigurable Architectures, Workshop on Formal Methods for Parallel Programming, Workshop on Optics and Computer Science, Workshop on Run Time Systems for Parallel Programming, Workshop on Fault Tolerant Parallel and Distributed Systems. All papers published in the workshops proceedings were selected by the program committee on the basis of referee reports. Each paper was reviewed by independent referees who judged the papers for originality, quality, and consistency with the themes of the workshops.

Languages and Compilers for Parallel Computing Siddharta Chatterjee, 1999-09-24 This book constitutes the thoroughly refereed post-workshop proceedings of the 11th International Workshop on Languages and Compilers for Parallel Computing, LCPC 98, held in Chapel Hill, North Carolina, USA, in August 1998. The 24 revised full papers presented have gone through two rounds of selection and reviewing. The volume is divided into topical sections on: Java, locality, network computing, Fortran, irregular applications, instructions, scheduling, and dependence analysis.
