How does coding change the way we think about architecture This question opens up an important research perspective In this book Miro Roman and his AI Alice_ch3n81 develop a playful scenario in which they propose coding as the new literacy of information They convey knowledge in the form of a project model that links the fields of architecture and information through two interwoven narrative strands in an infinite flow of real books Focusing on the intersection of information technology and architectural formulation the authors create an evolving intellectual reflection on digital architecture and computer science

Programs and Manifestoes on 20th-Century Architecture Ulrich Conrads, 1975-11-15 The present volume offers eloquent testimony that many of the master builders of this century have held passionate convictions regarding the philosophic and social basis of their art Nearly every important development in the modern architectural movement began with the proclamation of these convictions in the form of a program or manifesto The most influential of these are collected here in chronological order from 1903 to 1963 Taken together they constitute a subjective history of modern architecture compared with one another their great diversity of style reveals in many cases the basic differences of attitude and temperament that produced a corresponding divergence in architectural style In point of view the book covers the aesthetic spectrum from right to left from programs that rigidly generate designs down to the smallest detail to revolutionary manifestoes that call for anarchy in building form and town plan The documents placed in context by the editor are also international in their range among them are the seminal and prophetic statements of Henry van de Velde Adolf Loos and Bruno Taut from the early years of the century Frank Lloyd Wright's 1910 annunciation of Organic Architecture Gropius's original program for the Bauhaus founded in Weimar in 1919 Towards a New Architecture Guiding Principles by Le Corbusier the formulation by Naum Gabo and Antoine Pevsner of the basic principles of Constructivism and articles by R Buckminster Fuller on universal architecture and the architect as world planner Other pronouncements some in flamboyant style including those of Erich Mendelsohn Hannes Meyer Theo van Doesburg Oskar Schlemmer Ludwig Mies van der Rohe El Lissitzky and Louis I Kahn There are also a number of collective or group statements issued in the name of movements such as CIAM De Stijl ABC the Situationists and GEAM Since the dramatic effectiveness of the manifesto form is usually

heightened by brevity and conciseness it has been possible to reproduce most of the documents in their entirety only a few have been excerpted

Modern Architecture Frank Lloyd Wright, 2021-07-13 Frank Lloyd Wright's classic account of his vision for an organic architecture in a beautifully designed new edition Modern Architecture is a landmark text the first book in which America's greatest architect put forth the principles of a fundamentally new organic architecture that would reject the trappings of historical styles while avoiding the geometric abstraction of the machine aesthetic advocated by contemporary European modernists One of the most important documents in the development of modern architecture and the career of Frank Lloyd Wright Modern Architecture is a provocative and profound polemic against America's architectural eclecticism commercial skyscrapers and misguided urban planning The book is also a work of savvy self promotion in which Wright not only advanced his own concept of an organic architecture but also framed it as having anticipated by decades and bettered what he saw as the reductive modernism of his European counterparts Based on the 1931 original for which Wright supplied the cover illustration this beautiful edition includes a new introduction that puts Modern Architecture in its broader architectural historical and intellectual context for the first time The subjects of these lively lectures from Machinery Materials and Men to The Tyranny of the Skyscraper and The City move from a general statement of the conditions of modern culture to particular applications in the fields of architecture and urbanism at ever broadening scales Wright's vision in Modern Architecture is ultimately to equate the truly modern with romanticism imagination beauty and nature all of which he connects with an underlying sense of American democratic freedom and individualism

The Autopoiesis of Architecture, Volume II Patrik Schumacher, 2012-04-24 This is the second part of a major theoretical work by Patrik Schumacher which outlines how the discipline of architecture should be understood as its own distinct system of communication Autopoiesis comes from the Greek and means literally self production it was first adopted in biology in the 1970s to describe the essential characteristics of life as a circular self organizing system and has since been transposed into a theory of social systems This new approach offers architecture an arsenal of general comparative concepts It allows architecture to be understood as a distinct discipline which can be analyzed in elaborate detail while at the same time offering insightful comparisons with other subject areas such as art science and political discourse On the basis of such comparisons the book insists on the necessity of disciplinary autonomy and argues for a sharp demarcation of design from both art and engineering Schumacher accordingly argues controversially that design as a discipline has its own sui generis intelligence with its own internal logic reach and limitations Whereas the first volume provides the theoretical groundwork for Schumacher's ideas focusing on architecture as an autopoietic system with its own theory history medium and its unique societal function the second volume addresses the specific contemporary challenges and tasks that architecture faces It formulates these tasks looking specifically at how architecture is seeking to organize and articulate the complexity of post fordist network society The volume explicitly addresses how current architecture can upgrade its design methodology in the

face of an increasingly demanding task environment characterized by both complexity and novelty Architecture s specific role within contemporary society is explained and its relationship to politics is clarified Finally the new global style of Parametricism is introduced and theoretically grounded
