a mathematical kind Mathematical models extending from the almost purely quantitative methods of physics to the purely verbal conceptual explanations are described Emphasis is placed on catastrophe theoretic models that exemplify the use of soft mathematics in situations in which the use of hard quantitative models is not possible Comprised of 21 chapters this book begins with an overview of the role of mathematics in theoretical archaeology followed by a discussion on two general categories of mathematical methods that seem to be suitable for modeling cultural transformations methods of dynamical systems theory and methods that give greater emphasis on discrete entities and the structural relations or patterns among them Subsequent chapters deal with the use of mathematics in history morphogenesis in biological and social systems simulation of the growth of hierarchies and logistic trends in Southwest population growth A reconstruction of political units in the Valley of Mexico during the Toltec period is also presented This monograph will be of interest to archaeologists anthropologists historians biologists sociologists and mathematicians

Using Science to Improve the BLM Wild Horse and Burro Program Committee to Review the Bureau of Land Management Wild Horse and Burro Management Program, Board on Agriculture and Natural Resources, Division on Earth and Life Studies, National Research Council, 2013-09-18 Using Science to Improve the BLM Wild Horse and Burro Program A Way Forward reviews the science that underpins the Bureau of Land Management's oversight of free ranging horses and burros on federal public lands in the western United States concluding that constructive changes could be implemented The Wild Horse and Burro Program has not used scientifically rigorous methods to estimate the population sizes of horses and burros to model the effects of management actions on the animals or to assess the availability and use of forage on rangelands Evidence suggests that horse populations are growing by 15 to 20 percent each year a level that is unsustainable for maintaining healthy horse populations as well as healthy ecosystems Promising fertility control methods are available to help limit this population growth however In addition science based methods exist for improving population estimates predicting the effects of management practices in order to maintain genetically diverse healthy populations and estimating the productivity of rangelands Greater transparency in how science based methods are used to inform management decisions may help increase public confidence in the Wild Horse and Burro Program

Chiras,2009-01-17 [Saving Migrant Birds](#) John Faaborg,2002-12-01 In the 1980s numerous scientific surveys documented both declining bird populations especially among Neotropical songbirds that winter in the tropics and the loss of tropical rain forest habitat Drawing the seemingly obvious conclusion scientists and environmental activists linked songbird declines to loss of tropical habitats and alerted the world to an impending ecological catastrophe Their warnings led to the establishment of the Neotropical Migratory Bird Conservation Program also known as Partners in Flight the self proclaimed largest conservation effort in history Looking back over more than a decade of efforts to save migrant birds John Faaborg offers the first serious evaluation of the state of songbird populations today the effectiveness of conservation programs such as Partners in Flight and the reliability and completeness of scientific research on migrant birds Taking neither an alarmist nor a complacent approach he shows that many factors besides habitat loss affect bird populations and that Neotropical migrants as a group are not declining dramatically though some species adapt to habitat alteration more successfully than others Faaborg s state of the art survey thus clarifies the kinds of information we will need and the conservation efforts we should undertake to ensure the long term survival of Neotropical migrant birds **Evidence-Based Practice for Nurses: Appraisal and Application of Research with Navigate Advantage Access** Nola A. Railsback,Bret C. Harvey,2020-05-19 Ecologists now recognize that the dynamics of populations

communities and ecosystems are strongly affected by adaptive individual behaviors Yet until now we have lacked effective and flexible methods for modeling such dynamics Traditional ecological models become impractical with the inclusion of behavior and the optimization approaches of behavioral ecology cannot be used when future conditions are unpredictable due to feedbacks from the behavior of other individuals This book provides a comprehensive introduction to state and prediction based theory or SPT a powerful new approach to modeling trade off behaviors in contexts such as individual based population models where feedbacks and variability make optimization impossible Modeling Populations of Adaptive Individuals features a wealth of examples that range from highly simplified behavior models to complex population models in which individuals make adaptive trade off decisions about habitat and activity selection in highly heterogeneous environments Steven Railsback and Bret Harvey explain how SPT builds on key concepts from the state based dynamic modeling theory of behavioral ecology and how it combines explicit predictions of future conditions with approximations of a fitness measure to represent how individuals make good not optimal decisions that they revise as conditions change The resulting models are realistic testable adaptable and invaluable for answering fundamental questions in ecology and forecasting ecological outcomes of real world scenarios
