Geriatric Medicine Michael R. Wasserman, Debra Bakerjian, Sunny Linnebur, Sharon Brangman, Matteo Cesari, Sonja

Rosen,2024-02-19 Both volumes sold as a combined set for a one time purchase Older adults represent the most rapidly growing demographic in the U S and in many developed countries around the world The field of geriatric medicine is still relatively young and is only recently seeing a significant increase in peer reviewed literature Medicare and Medicaid expenditures related to older adults are nearly a trillion dollars year in the US How our healthcare system cares for older adults and how those older adults navigate an increasingly complex system is of the utmost importance According to the Institute of Medicine physicians and other healthcare professionals receive an inadequate amount of training in geriatric medicine Geriatric medicine is based on the concept of delivering person centered care with a focus on function and quality of life It is essential that physicians nurse practitioners physician assistants pharmacists social workers and other health care professionals all be knowledgeable about the geriatric approach to care Geriatric medicine varies from most other fields in medicine While many specialties function on the basis of evidence based literature geriatricians and other clinicians caring for older adults must integrate relatively limited evidence with variable physiological changes and complex psychosocial determinants Geriatricians are used to caring for 90 year olds with multiple chronic illnesses Their variable physiology leads to uncertain responses to pharmacotherapy and their personal goals and wishes need to be incorporated into any plan of care Practicing geriatric medicine requires the ability to see patterns But it goes one step further as the rules are constantly in flux Every patient is an individual with particular needs and goals In order to provide true person centered care to older adults one has to incorporate these factors into the decision making process The proposed handbook is designed to present a comprehensive and state of the art update that incorporates existing literature with clinical experience Basic science and the physiology of aging create a background but are not the main focus This is because every chapter has been written through the lens of person centered care This book is about focusing on what matters to the person and how that is not always about pathology and physiology The reader generally will not find simple solutions to symptoms diseases and syndromes In fact the key to caring for geriatric patients is the ability to think both critically and divergently at the same time Geriatrics encompasses multiple disciplines and spans all of the subspecialties It requires knowledge of working within an interdisciplinary team It requires an appreciation of how quality of life varies with each individual and creates treatment and care plans that also vary And most of all it requires a firm commitment to first learning who the person is so that all of the necessary data can be analyzed and integrated into a true person centered plan of care This book aims to serve as an unparalleled resource for meeting these challenges Updated and revised from the previous edition this text features over 40 new peer reviewed chapters new references and a wide array of useful new tools that are updated on a regular basis by interdisciplinary and interprofessional experts in geriatric medicine Special Education and School Nurses Frances Belmonte-Mann MA RN,2019-07-26 A veteran school nurse and former school nurse consultant bring their wealth of knowledge to the forefront in this indispensable guide for school nurses who care about keeping children healthy so they can

learn Frances Belmonte Mann and Jessica H Gerdes pay particular attention to the increase in students with special needs and chronic conditions that affect education They go beyond the common health history to help readers evaluate the health of students as it relates to academic achievement The authors focus on turning over every stone in a search for unknown health conditions or unrecognized effects of known health conditions understanding the role school nurses play in the special education process and writing individualized education program goals for health issues that affect learning and applying instructional techniques and nursing interventions to improve student outcomes in a meaningful way While written for nurses the guide serves as an important resource for other school staff members including principals assistant principals deans department chairs team leaders special education coordinators district administrators classroom teachers and others with questions about the role nurses play in special education Communication and Mental Illness Jenny France, Sarah Kramer, 2001-01-15 This book is for improving understanding of individuals with mental illness It offers theoretical knowledge of the methods of communication commonly adopted by individuals with a variety of diagnoses of mental illness and how information about communication can influence service provision ending with suggestions for future policy and practice
