

Introduction :-

Transformer is one of the most important device in electrical system.

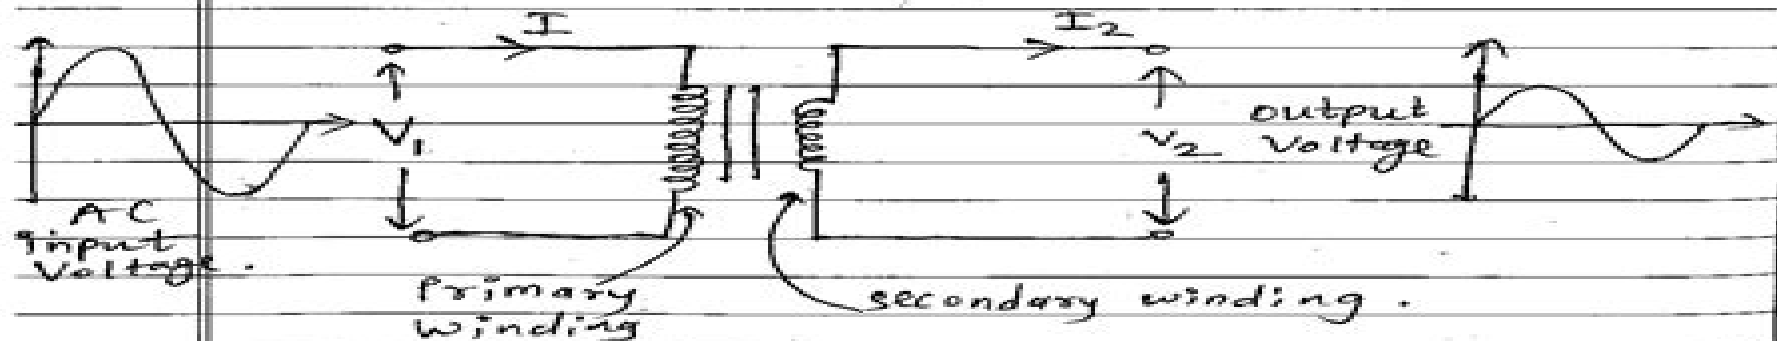

Transformer is used to increase or decrease the voltage as per requirement.

Transformer converts electrical energy into magnetic energy then again magnetic energy to electrical energy.

Basically transformer works on the principle of Faradays Law of Electromagnetic induction.

In transformer, there are two circuits one primary circuit and second, secondary circuit.

Both circuits (or windings) are magnetically coupled to each other, by ~~are~~ by ~~are~~ using iron core.
