Food Safety and the WTO: The Interplay of Culture, Science and Technology Marsha Echols, 2001-11-16 Today's international trade regime explicitly rejects cultural perceptions of what is safe to eat overturning millennia of tradition The World Trade Organization WTO Agreement on the Application of Sanitary and Phytosanitary Measures SPS enshrines science as the arbiter in resolving disputes involving this vital human need This mandate however is under attack from many quarters Critics cite environmental and ethical concerns unpredictably changing technology taste food preferences local culture adequacy of governmental implementation of WTO standards and the reliability of scientific opinion

A basic conflict has crystallized food as culture versus food as commerce The WTO SPS approach is increasingly challenged for its balance in favor of economic considerations and for its visible undermining of unique cultural identities This important book explores the relationship between the SPS Agreement food traditions science and technology It deliberately confronts those trade experts who refuse to allow other social sciences to influence their economics based trade theory The author ably investigates the local perception of food and food safety from the anthropological and historical points of view the evolution of food production technologies and the medicinal proscriptive taboo and security aspects of food that continue to prevail in nearly all cultures today She succeeds in demonstrating that no matter how strong the faith in science and economics it is unwise to flagrantly dismiss the deeply rooted beliefs of billions of people a huge majority of the world s population The Beef Hormones case the remaining sovereignty related to food safety measures the increasing significance of appropriate levels of protection and the precautionary principle the redefinition of food hazard to include production processes as well as food itself genetically modified seeds and food products the concept of risk in the science based context of the Codex Alimentarius these are among the issues and topics covered in depth The author concludes that although quick legal resolutions of trade disputes about what people should or should not eat might provide a win for open trade support for the entire structure and rationale of the WTO is undermined unless at the least some flexibility of interpretation is introduced into the WTO Dispute Resolution System in order to recognize the weight and validity of public opinion Food safety is arguably the most important issue affecting international commerce today urgently demanding enlightened discussion and action based on global consensus This well researched and thoughtful contribution offers significant clarification and perspective to policymakers lawyers academics and others engaged in this critical human drama in progress on the world stage

Meade, 2017-08-21 Elementary Differential Equations and Boundary Value Problems 11e like its predecessors is written from the viewpoint of the applied mathematician whose interest in differential equations may sometimes be quite theoretical sometimes intensely practical and often somewhere in between The authors have sought to combine a sound and accurate but not abstract exposition of the elementary theory of differential equations with considerable material on methods of solution analysis and approximation that have proved useful in a wide variety of applications While the general structure of the book remains unchanged some notable changes have been made to improve the clarity and readability of basic material about differential equations and their applications In addition to expanded explanations the 11th edition includes new problems updated figures and examples to help motivate students The program is primarily intended for undergraduate students of mathematics science or engineering who typically take a course on differential equations during their first or second year of study The main prerequisite for engaging with the program is a working knowledge of calculus gained from a normal two or three semester course sequence or its equivalent Some familiarity with matrices will also be helpful in the chapters on systems of differential equations
