Basics of Probability and Stochastic Processes Esra Bas, 2019-11-05. This textbook explores probability and stochastic processes at a level that does not require any prior knowledge except basic calculus. It presents the fundamental concepts in a step by step manner and offers remarks and warnings for deeper insights. The chapters include basic examples which are revisited as the new concepts are introduced. To aid learning figures and diagrams are used to help readers grasp the concepts and the solutions to the exercises and problems. Further a table format is also used where relevant for better comparison of the ideas and formulae. The first part of the book introduces readers to the essentials of probability including combinatorial analysis, conditional probability and discrete and continuous random variable. The second part then covers fundamental stochastic processes including point counting, renewal and regenerative processes, the Poisson process, Markov chains, queueing models and reliability theory. Primarily intended for undergraduate engineering students, it is also useful for graduate level students wanting to refresh their knowledge of the basics of probability and stochastic processes.

Modes of Representation in Developing Statistical Thinking in Education Anastasiadou, Sofia D., Seremeti, Lamprini, 2025-05-29. Developing the ability to understand and use multiple representations is vital for deepening students' comprehension of statistical probabilistic and mathematical concepts. This skill enhances problem solving by enabling learners to translate ideas across various forms leading to more flexible and meaningful understanding. Representational competency is closely linked to communication, critical thinking and the ability to engage with real world data. Moreover, students' attitudes, emotions and self confidence significantly influence their motivation and success in these subjects. Strengthening these aspects in education can lead to more effective learning experiences and greater long term achievement in math and statistics. *Modes of Representation in Developing Statistical Thinking in Education* explores different modes of representations in teaching and learning statistical probabilistic notions and attitudes in developing statistical thinking in education. By bringing together contributions from global experts, the volume fosters interdisciplinary collaboration, inspires new research directions and provides the knowledge and tools necessary to navigate the evolving landscape of statistics education. Covering topics such as artificial intelligence, mathematics education and web tools, this book is an excellent resource for researchers, academicians, educators, policymakers, data scientists and more.

Machine Learning and Artificial Intelligence: Concepts, Algorithms and Models Reza Rawassizadeh, 2025-03-15. Mastering AI, machine learning and data science often means piecing together concepts scattered across countless resources.

from statistics and visualizations to foundational models and large language models This book the result of eight years of effort brings it all together in one accessible engaging package It clarifies artificial intelligence and data science blending core mathematical principles with a clear reader friendly approach Unlike traditional textbooks that lean heavily on equations and mathematical formalization the author starts with minimal prerequisites layering deeper math as the reader progresses Each concept algorithm or model is unpacked through clear hands on examples that build the reader s skills step by step It strikes a balance between theoretical foundations and practical application serving as both an academic reference and a practical guide Furthermore the book uses humor casual language and comics to make the challenging concepts and topics relatable and fun Any resemblance between the jokes and real life is pure coincidence and no offense is intended
