1

**Section Review:** In this section you learned that our best understanding of the evolutionary relationships between vertebrate groups can be shown as a \_\_\_\_\_ tree. In divergent evolution, related evolutionary lines become more \_\_\_\_\_ as they are subjected to different forces of natural selection. Divergent evolution is also known as \_\_\_\_\_. In convergent evolution, evolutionary lines that are subjected to similar forces of natural selection become more \_\_\_\_\_ to one another as they evolve.

Ectotherms must obtain the heat they need from their \_\_\_\_\_. They typically rely primarily on \_\_\_\_\_ to regulate their body temperature. Endotherms generate all the heat they need through \_\_\_\_\_ activity. They typically rely on physiological mechanisms to regulate their body temperature. They also use a number of \_\_\_\_\_ to prevent overheating.
