The Nervous System

The nervous system is an extremely complex, highly intricate, and very sensitive structure that regulates everything that happens throughout the human body. The main purpose of all the nervous system and its various parts is to carry and send information, and give the body signals that control the muscles. The nervous system is basically made of two systems: the central nervous system and the peripheral nervous system.

Central Nervous System

The central nervous system, or CNS, is made up of the brain and spinal cord. The brain is the most important part of the nervous system. It is located in the head and is the center of all the body's activities. It is made up of billions of neurons that are connected to each other. The brain is the control center of the body and is responsible for all the body's activities. It is the only part of the body that can think and feel. The brain is also the only part of the body that can learn and remember. The brain is the most important part of the body and is the only part of the body that can think and feel. The brain is also the only part of the body that can learn and remember.

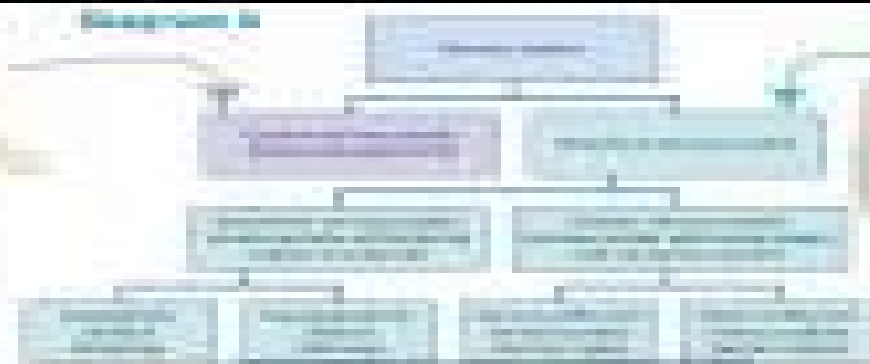

Peripheral Nervous System

There are all parts of the nervous system that are not part of the central nervous system, and they make up the peripheral nervous system, or PNS. The PNS is made up of all the nerves that are outside of the brain and spinal cord. It is responsible for carrying information from the brain and spinal cord to the rest of the body. The PNS is also responsible for carrying information from the rest of the body back to the brain and spinal cord. The PNS is the only part of the nervous system that is not part of the central nervous system.

The PNS is made up of two main parts: the somatic nervous system and the autonomic nervous system. The somatic nervous system is responsible for controlling the body's voluntary movements. It is the only part of the nervous system that is under conscious control. The autonomic nervous system is responsible for controlling the body's involuntary movements. It is the only part of the nervous system that is not under conscious control. The autonomic nervous system is made up of two main parts: the sympathetic nervous system and the parasympathetic nervous system. The sympathetic nervous system is responsible for the body's "fight or flight" response. The parasympathetic nervous system is responsible for the body's "rest and digest" response.
