

An abstract painting of a desert landscape. The sky is a pale, hazy blue. The horizon is a bright yellow band. Below the horizon, the ground is a mix of warm, earthy tones: orange, red, and brown. In the foreground, there are dark, silhouetted shapes that look like rocks or small structures. The overall style is impressionistic and textured.

**The Origins of Grammar** Martin Edwardes, 2010-07-22 Quintessential work on the nature and origins of language grammar and its role in language and our own evolution as humans

**The Origins of Self** Martin P. J. Edwardes, 2019-07-22 The Origins of Self explores the role that selfhood plays in defining human society and each human individual in that society It considers the genetic and cultural origins of self the role that self plays in socialisation and language and the types of self we generate in our individual journeys to and through adulthood Edwardes argues that other awareness is a relatively early evolutionary development present throughout the primate clade and perhaps beyond but self awareness is a product of the sharing of social models something only humans appear to do The self of which we are aware is not something innate within us it is a model of our self produced as a response to the models of us offered to us by other people Edwardes proposes that human construction of selfhood involves seven different types of self All but one of them are internally generated models and the only non model the actual self is completely hidden from conscious awareness We rely on others to tell us about our self and even to let us know we are a self

**Grammaticalization and Variation** Nicole Hober, 2021-11-08 Grammaticalization research looks back on a rich history but recent empirical findings as well as new insights from cognitive science and psycholinguistics entice researchers to reassess and review what we know about the process This book presents a detailed study of the grammaticalization of motion verbs in the Mayan languages The focus lies on variation in the parallel grammaticalization of motion verbs into auxiliaries and directionals It is demonstrated that the genetically related and areally close languages do not always grammaticalize source items in the same way both from a formal and meaning perspective The empirical findings suggest that traditional theories on grammaticalization do not capture the complex nature of the phenomenon entirely Therefore a Network Approach to grammaticalization is introduced which emphasizes a meaning first account The approach seeks to combine the conceptual with the discourse pragmatic while being firmly grounded in cognitive and psychological facts New insights into the grammaticalization behavior of the world s languages are offered while well established notions and assumptions within the grammaticalization research paradigm are reviewed and challenged
