Overview

The Night Sky works by using your devices inbuilt GPS and compass/gyroscope (if available) to know where you are facing your iPhone, iPod touch or iPad. Simply hold your device up to the sky and you will see a star map overlaid on your screen which tells you which stars, planets, galaxies, constellations or even satellites you are looking at! It's very clever science and it works like magic!

The Night Sky User Guide:

David Levy's Guide to the Night Sky David H. Levy, 2001-11-22 The perfect introduction for the novice astronomer this book stirs the imagination and puts observation in a framework of social activity and personal adventure Written by an award winning astronomer it is a technical guide to the sky full of helpful practical hints The author's lively style engages entertains and informs Newcomers will learn how to enjoy the Moon planets comets meteors and distant galaxies observable through a small telescope Levy describes the features of the Moon from night to night how to observe constellations how best to view the stars nebulae and galaxies how to follow the planets on their annual trek among the constellations how to map the sky how to find a new comet how to buy or even make a telescope what to see in a month of lunar observations or a year of stellar observation and much more

The NexStar User's Guide Michael Swanson, 2012-12-06 Michael Swanson's online discussions with literally thousands of NexStar owners made it clear that there was a desperate need for a book such as this one that provides a complete detailed guide to buying using and maintaining NexStar telescopes Although this book is highly comprehensive it is suitable for beginners there is a chapter on Astronomy Basics and experts alike Celestron's NexStar telescopes were introduced in 1999 beginning with their first computer controlled go to model a 5 inch More models appeared in quick succession and Celestron's new range made it one of the two dominant manufacturers of affordable go to telescopes

The Vixen Star Book User Guide James Chen, Adam Chen, 2015-10-01 This book is for anyone who owns or is thinking of owning a Vixen Star Book Ten telescope mount or its predecessor A revolution in amateur astronomy has occurred in the past decade with the wide availability of high tech computer driven Go To telescopes Vixen Optics is leading the way by offering the Star Book Ten system with its unique star map graphics software The Star Book Ten is the latest version of computer telescope control using star map graphics as a user interface first introduced in the original Star Book first offered in 2003 The increasingly complicated nature of this software means that learning to optimize this program is not straightforward and yet the resulting views when all features are correctly deployed can be phenomenal After a short history of computerized Go To telescopes for the consumer amateur astronomer market Chen offers a treasury of technical information His advice tips and solutions aid the user in getting the most out of the Star Book Ten system in observing sessions

A Buyer's and User's Guide to Astronomical Telescopes & Binoculars James Mullaney, 2007-05-26 Both beginning novice amateur astronomers at the level of Astronomy and Night Sky magazine readers as well as more advanced amateur astronomers level of Sky and Telescope will find this book invaluable and fascinating It includes detailed up to date information on sources selection and use of virtually every major type brand and model of such instruments on today's market The book also includes details on the latest released telescope lines e.g. the 10 12 14 and 16 inch aperture models of the Meade LX R series As a former editor for Sky Telescope Astronomy and Star Sky magazines the author is the ideal person to write this book

A User's Guide to the Meade LXD55 and LXD75 Telescopes Martin Peston, 2010-04-28 I have owned

telescopes for over 25 years since I was a young lad I purchased an LXD55 AR 6 Refractor in 2002 and was one of the first to own one in the UK I am also a proud owner of an LXD75 SC 8 Armed with these two very different telescopes I have spent many hours searching the skies for interesting objects using Meade's Autostar Goto facility My motivation to write a book about the LXD Goto telescope series first came from comments about an LXD55 AR 6 Refractor review that was published on the LXD55 com website From then on I have had regular emails from people asking technical questions about the telescope and which model is best suited for them Whilst attending Star parties in the UK I found that many LXD owners would struggle to use them even at a basic level especially if they have never owned or used an equatorially mounted Goto telescope before Since the first LXD55 models came out in early 2002 owners have struggled to find useful information to help them use the telescopes to the best advantage There have been mixed reactions about its quality and performance Hence this book is directed towards those who are new to Goto and the LXD telescope

The NexStar User's Guide II
Michael Swanson, 2017-10-31 Michael Swanson's online discussions with literally thousands of NexStar owners made it clear that there was a desperate need for a book such as this one that provides a complete detailed guide to buying using and maintaining NexStar telescopes Although this book is highly comprehensive it is suitable for beginners there is a chapter on Astronomy Basics and experts alike Celestron's NexStar telescopes were introduced in 1999 beginning with their first computer controlled go to model a 5 inch More models appeared in quick succession and Celestron's new range made it one of the two dominant manufacturers of affordable go to telescopes

A Buyer's and User's Guide to Astronomical Telescopes and Binoculars James Mullaney, 2013-10-10 Amateur astronomers of all skill levels are always contemplating their next telescope and this book points the way to the most suitable instruments Similarly those who are buying their first telescopes and these days not necessarily a low cost one will be able to compare and contrast different types and manufacturers This exciting and revised new guide provides an extensive overview of binoculars and telescopes It includes detailed up to date information on sources selection and use of virtually every major type brand and model on today's market a truly invaluable treasure trove of information and helpful advice for all amateur astronomers Originally written in 2006 much of the first edition is inevitably now out of date as equipment advances and manufacturers come and go This second edition not only updates all the existing sections of A Buyer's and User's Guide to Astronomical Telescopes and Binoculars but adds two new ones Astro imaging and Professional Amateur collaboration Thanks to the rapid and amazing developments that have been made in digital cameras not those specialist cool chip astronomical cameras not even DSLRs but regular general purpose vacation cameras it is easily possible to image all sorts of astronomical objects and fields Technical developments including the Internet have also made it possible for amateur astronomers to make a real contribution to science by working with professionals Selecting the right device for a variety of purposes can be an overwhelming task in a market crowded with observing options but this comprehensive guide clarifies the process Anyone planning to purchase

binoculars or telescopes for astronomy whether as a first instrument or as an upgrade to the next level will find this book a treasure trove of information and advice It also supplies the reader with many useful hints and tips on using astronomical telescopes or binoculars to get the best possible results from your purchase

The NexStar Evolution and SkyPortal User's Guide James L. Chen,Adam Chen,2016-05-26 This book serves as a comprehensive guide for using a Nexstar Evolution mount with WiFi SkyPortal control walking the reader through the process for aligning and operating the system from a tablet or smartphone The next generation Go To mount from Celestron this is compatible not only with the Nextstar Evolution but also with older mounts It is the ideal resource for anyone who owns or is thinking of owning a Nexstar Evolution telescope or adapting their existing Celestron mount Pros and cons of the system are thoroughly covered with a critical depth that addresses any possible question by users Beginning with a brief history of Go To telescopes and the genesis of this still new technology the author covers every aspect of the newly expanding capability in observing This includes the associated Sky Portal smartphone and tablet application the transition from the original Nexstar GoTo system to the new SkyPortal system the use of the Sky Portal application with its Sky Safari 4 basic software and Celestron WiFi adaptations and discussions on the use of SkyPortal application using the Celestron adapter on older Celestron mounts Comments and recommendations for equipment enable the reader to successfully use and appreciate the new WiFi capability without becoming overwhelmed Extensively illustrated using actual screenshots from the program interface this is the only guide to the Nextstar SkyPortal an observer will need

Lunar and Planetary Webcam User's Guide Martin Mobberley,2006-08-03 In the last few years cheap webcams have revolutionized amateur astronomy by providing a very inexpensive alternative to purpose made astronomical CCD cameras which use refrigerated imaging chips and are thus extremely expensive Webcams are capable of more advanced work than normal digital cameras because their simple construction makes it easy to remove the webcam s lens allowing it to be interfaced directly to a telescope Using a webcam is not difficult but most amateur astronomers who have tried to do this do not achieve the finest results despite the webcam s potential There are numerous imaging and image processing tricks and techniques and all of them are needed to get the best results Along with webcam technology has come simple to use image processing and enhancement using a PC the most powerful technique is stacking in which the best images out of hundreds are selected and summed automatically to provide startlingly good results Lunar and Planetary Webcam User s Guide de mystifies the jargon of webcams and computer processing and provides detailed hints and tips for imaging the Sun Moon and planets with a webcam He looks at each observing target separately describing and explaining all specialised techniques in context Glance through the images in this book to see just how much you can easily achieve by using a webcam with your telescope

Navigating the Night Sky Guilherme de Almeida,2012-11-03 This book will interest anyone who marvels at the night sky and would like to learn to recognise constellations and identify the brightest stars by name Step by step the reader is guided through the knowledge

needed to recognise key constellations identify stars and planets and interpret changes in the overall appearance of the sky throughout the year *Human Vision and The Night Sky* Michael Borgia, 2006-12-11 For years the images have blazed through your imagination They are the magnificent full color photographs returned by the Hubble Space Telescope and its sister Great Observatories of the grand depths of the cosmos From the pillars of creation considered to be Hubble's signature image to the incomprehensible depths of the Hubble Deep Fields to the intricate details imaged in the surface and cloud tops of Mars or Jupiter the power of the Hubble Telescope to turn on the public to science is unparalleled in the history of modern culture They also have spurred new telescope sales to unimagined highs And after years of watching the heavens through the eyes of NASA you've decided it's time to see it for yourself You make the trip to the department store and pick up that shiny new 500 telescope set it up and soon you're in business Unfortunately the high initial expectations usually give way to disappointment Instead of seeing the magnificent swirling clouds of gas in the Orion Nebula you see a pale green gray cloud with a couple of nondescript stars lurking nearby The swirling red yellow and brown storms of Jupiter are nowhere to be seen only varying shades of gray in the planet's cloud bands assuming you can see bands at all And Mars After waiting all night for the red planet to rise up over the morning horizon you are greeted by nothing more than a featureless reddish orange dot

Compendium of Practical Astronomy Günter D. Roth,2012-12-06 It is a pleasure to present this work which has been well received in German speaking countries through four editions to the English speaking reader We feel that this is a unique publication in that it contains valuable material that cannot easily if at all be found elsewhere We are grateful to the authors for reading through the English version of the text and for responding promptly for the most part to our queries Several authors have supplied us on their own initiative or at our suggestion with revised and updated manuscripts and with supplementary English references We have striven to achieve a translation of Handbuch for Sternfreunde which accurately presents the qualitative and quantitative scientific principles contained within each chapter while maintaining the flavor of the original German text Where appropriate we have inserted footnotes to clarify material which may have a different meaning and or application in English speaking countries from that in Germany When the first English edition of this work Astronomy A Handbook translated by the late A Beer appeared in 1975 it contained 21 chapters This new edition is over twice the length and contains 28 authored chapters in three volumes At Springer s request we have devised a new title Compendium of Practical Astronomy to more accurately reflect the broad spectrum of topics and the vast body of information contained within these pages

Real Astronomy with Small Telescopes Michael Gainer, 2007-06-04 The small refracting telescope with its simple direct design and construction and permanently aligned optics is the time tested standard for personal use Easily portable it can be taken out of the house and set up at a moment's notice Or it can be packed conveniently into a small car for traveling to a dark observing site With moderate care and minimal maintenance the telescope and mount can last for generations These instruments provide sharp crisp high contrast images of the Moon and planets They are less susceptible to the effects of unstable air than larger ones and because of their low maintenance and durability they are ideal for the parent educator or lifelong learner Until recently however the high cost of small telescopes of sufficient quality for serious astronomical use has limited their accessibility During the past decade innovations in optical design and manufacture have lowered cost and improved quality Current developments in lens design make it possible to produce affordable refracting telescopes with short tube lengths and greater versatility The once very costly 90 mm Maksutov Cassegrain with its optimum combination of effective optics and portability now sells for a modest price I have often seen small instruments referred to as grab and go or quick look not worthy of consideration for serious observing I maintain they can be much more Despite their limits in types of observation 80 mm refractors and 90 mm Maksutovs have sufficient aperture and magnifying power to provide a lifetime of observing pleasure They are ideal for lunar occultation measurements tracking the solar activity cycle observing variable stars and measuring binary stars Although all the activities described here are equally applicable to larger instruments none of them require an aperture larger than 80 mm Through the use of common digital

cameras the limiting stellar magnitude and image scale of small telescopes can be increased dramatically thus providing results one normally expects from larger instruments. Much of this book applies that principle to making interesting and useful astronomical observations. I have taken novel approaches to extending the use of small instruments for quantitative observations by applying unique methods for the analysis of digital camera photographs.

Amateur Telescope Making Stephen Tonkin, 2012-12-06 Many amateur astronomers make their own instruments either because of financial considerations or because they are just interested. *Amateur Telescope Making* offers a variety of designs for telescopes, mounts and drives which are suitable for the home constructor. The designs range from simple to advanced but all are within the range of a moderately well equipped home workshop. The book not only tells the reader what he can construct but also what it is sensible to construct given what time is available commercially. Thus each chapter begins with reasons for undertaking the project then looks at theoretical consideration before finishing with practical instructions and advice. An indication is given as to the skills required for the various projects. Appendices list reputable sources of mail order materials and components. The telescopes and mounts range from shoestring very cheap instruments to specialist devices that are unavailable commercially.

The New Amateur Astronomer Martin Mobberley, 2012-12-06 Amateur astronomy has changed beyond recognition in less than two decades. The reason is of course technology. Affordable high quality telescopes, computer controlled go to mountings, autoguiders, CCD cameras, video and as always computers and the Internet are just a few of the advances that have revolutionized astronomy for the twenty first century. Martin Mobberley first looks at the basics before going into an in depth study of what is available commercially. He then moves on to the revolutionary possibilities that are open to amateurs from imaging through spectroscopy and photometry to patrolling for near earth objects, the search for comets and asteroids that may come close to or even hit the earth. *The New Amateur Astronomer* is a road map of the new astronomy, equally suitable for newcomers who want an introduction or old hands who need to keep abreast of innovations. From the reviews: This is one of several dozen books in Patrick Moore's Practical Astronomy series. Amid this large family Mobberley finds his niche: the beginning high tech amateur. The book's first half discusses equipment: computer driven telescopes, CCD cameras, imaging processing software etc. This market is changing every bit as rapidly as the computer world so these details will be current for only a year or two. The rest of the book offers an overview of scientific projects that serious amateurs are carrying out these days. Throughout basic formulas and technical terms are provided as needed without formal derivations. An appendix with useful references and Web sites is also included. Readers will need more than this book if they are considering a plunge into high tech amateur astronomy but it certainly will whet their appetites. Mobberley's most valuable advice will save the book's owner many times its cover price: buy a quality telescope from a reputable dealer and install it in a simple shelter so it can be used with as little set up time as possible. A poor purchase choice and the hassle of setting up are why most fancy telescopes gather dust in

their owners dens Summing Up Highly recommended General readers lower and upper division undergraduates T D Oswalt
CHOICE March 2005 Astronomy with a Home Computer Neale Monks, 2006-03-30 Here is a one volume guide to just
about everything computer related for amateur astronomers Today s amateur astronomy is inextricably linked to personal
computers Computer controlled go to telescopes are inexpensive CCD and webcam imaging make intensive use of the
technology for capturing and processing images Planetarium software provides information and an easy interface for
telescopes The Internet offers links to other astronomers information and software The list goes on and on Find out here how
