

The Open Universe: An Argument for Indeterminism*

MENDEL SACHS, *Physics and Astronomy, State University
of New York at Buffalo*

Sir Karl R. Popper has published a very interesting and provocative set of three books, *Postscript to the Logic of Scientific Discovery*, intended as a sequel to his well-known *Logic of Scientific Discovery*.¹ This is the first of two of the books that I will review, the other one to follow: *Quantum Theory and the Schism in Physics*, is related to the subject of this book in their discussion of the philosophy of the quantum theory and its possible extension to a general philosophy of physics. The third book of the set, *Realism and the Aim of Science*, deals with Popper's view of the philosophy of science, *per se*, particularly his meaning of the term 'realism' in science, which I will discuss in this review.

The Open Universe puts forward Popper's main arguments in support of his notion of indeterminism, as an underlying concept of the physical world. At the outset, he makes clear a distinction between three kinds of indeterminism: religious, scientific, and metaphysical. But his thesis in this book deals mainly with what he calls 'scientific determinism', which he claims to refute once and for all. Popper asserts that one cannot conclusively refute religious or metaphysical determinism because they are based on faith rather than having a rational, logical basis. But he does present arguments that try to make these forms of determinism less believable than his (opposite) belief in indeterminism.

'Religious determinism', to Popper, refers to the existence of a higher spirit, God, *outside of* the universe, who is aware of the entire predetermined future of the universe, as it evolves in time according to His divine law. In Popper's view, this form of determinism (as the other forms) rejects the view of human free will, and is therefore unacceptable as a truth, in view of his 'common sense' awareness of free will.

'Scientific determinism' compares with religious determinism by replacing 'God' with 'nature', and replacing 'divine law' with 'natural law'. But it is crucial in Popper's argument that this form of determinism also includes the human being's predictive capacity—his ability to predict the future from the natural laws with absolute certainty. 'Metaphysical determinism' then removes the human being's predictive ability from the scene, asserting that all events in the world are predetermined, though not all of them are necessarily known or predictable by the human species. Thus, the adjectives, 'metaphysical' (or 'scientific') in the notion of determinism refer to predetermined laws of the universe in all of its manifestations, though in the absence (or in the presence) of

inspiration in many areas of our intellectual endeavor This volume is a result of that effort Topics cover Popper s views on rationality scientific methodology the evolution of knowledge and democracy and since Popper s philosophy has always had a strong interdisciplinary influence part of the volume discusses the impact of his ideas in such areas as education economics psychology biology or ethics The concept of falsification the problem of demarcation the ban on induction or the role of the empirical basis along with the provocative parallels between historicism holism and totalitarianism have always caused controversies The aim of this volume is not to smooth them but show them as a challenge In this time when the traditional role of reason in the Western thought is being undermined Popper s non foundationist model of reason brings the Enlightenment message into a new perspective Popper believed that the open society was vulnerable due precisely to its tolerance of otherness This is a matter of great urgency in the modern world as cultures based on different values gain prominence The processes related to the extending of the EU or the increasing economic globalization also raise questions about openness and democracy The volume s aim is to show the vitality of critical rationalism in addressing and responding to the problems of this time and this world

The Problem of Free Will Mathew Iredale, 2014-10-14 Do we really have freedom to act or are we slaves to our genes environment or culture Regular TPM columnist Mathew Iredale gets to grips with one of the most intractable issues in philosophy the problem of free will Iredale explores what it is about the free will problem that makes it so hard to resolve and argues that the only acceptable solution to the free will problem must be one that is consistent with what science tells us about the world It is here maintains Iredale that too many works on free will introductory or otherwise fall down by focusing only on how free will relates to determinism Iredale shows that there are clear areas of scientific research which are directly and significantly relevant to free will in a way that does not involve determinism Although these areas of scientific research do not allow us to solve the problem they do allow us to separate the more plausible ideas concerning free will from the less plausible

Learning, Teaching and Education Research in the 21st Century Joanna Swann, 2011-12-15 Learning Teaching and Education Research in the 21st Century draws on Karl Popper s evolutionary epistemology and challenges widespread assumptions about learning teaching and research that are embedded in the practices of many teachers and in the design of most education institutions worldwide Joanna Swann argues that to promote the growth of learning we need to encourage children and adolescents to exercise and develop creativity and criticality and that we need to provide and maintain environments in which they can safely engage in self initiated and self directed exploratory activity In accessible and engaging language the author presents philosophical arguments that support the defence and development of non authoritarian approaches to learning and teaching that can be used by individuals and groups working in or outside state funded schools In particular she provides tried and tested guidelines for student initiated curricula and a problem based methodology for professional development and action research
