**The Nuthatches** Erik Matthysen, 2010-01-31 The Nuthatches is based on the European Nuthatch with comparative information on the other west Palearctic and world species Comparisons with other nuthatch species provide general perspectives on biological species separation problems Features Comparative information on the other west Palearctic and world species Provides general perspectives on biological species separation problems *Current Ornithology* D.M. Power, 2013-06-29 In this volume I include chapters on continental population trends ornithology's contribution to the habitat concept social organization outside the breeding season the role of predation in limiting numbers and the evolution of prolonged incubation periods Authors are based in Belgium the United Kingdom and the United States Is there evidence for wholesale population declines in North American birds Robert Askins says yes with qualifications Fragmentation of forest causes the population of many forest interior species to decline and loss of winter forest habitat in Mexico Central America and the Greater Antilles is potentially serious Trends over the past 25 years are however difficult to discern Grassland and shrubland specialists have likewise diminished over the past quarter century Askins calls for management of regional landscapes to maintain habitat diversity As for habitats William Block and Leonard Brennan review the role of ornithology in developing the concept of habitat Their intention is to stimulate ornithologists to consider habitat as a unifying concept in contemporary ecology They describe uses of the habitat concept in basic and experimental ecology Recent advances in sociobiology stimulated deeper interest in social organization Erik Matthysen has gathered a diversity of information on social organization outside the breeding season both in migratory and in nonbreeding resident birds He discusses populations that continue individual associations outside the breeding season and site related aggression territoriality and reviews a number of long term benefits of these behaviors **Saving the World's Deciduous Forests** Robert A. Askins, Robert Askins, 2014-03-25 Deciduous forests have been remarkably resilient throughout their history recovering from major shifts in climate and surviving periods of massive deforestation But today the world's great forests confront more ominous threats than ever before This visionary book is the first to examine forests consisting of oaks maples hickories beeches chestnuts birches and ecologically similar animals and plants on three continents East Asia Europe and North America to reveal their common origin back in time the ecological patterns they share and the approaches to conservation that have been attempted on their behalf Although these forests face common problems threats due to human activities vary Different land use and agricultural practices on the three continents as well as different attitudes about what is worth preserving have led to strikingly different approaches to forest conservation Robert Askins explores the strengths and weaknesses of conservation efforts across the continents and concludes that the ideal strategy for the future will blend the best ideas from each *Tits, Nuthatches and Treecreepers* Simon Harrap, 2010-06-30 This guide covers all 110 of the world's species of tits nuthatches and creepers The Parulidae true tits Remizidae penduline tits and Aegithalidae long tailed tits

form the bulk of the book 78 species with a further 24 species of nuthatch and eight creepers The text covers each species under a number of headings identification sex and age voice distribution and movements habitat population habits breeding biology description movements geographical variation relationships and references     **Ringing & Migration** ,1989

**Interspecific Competition in Birds** André A. Dhondt,2012 Provides a current critical review of the importance of interspecific competition considering the evolutionary effects of interspecific competition its importance in structuring communities and influence on the traits of individual species     **Ardea** ,1989     **The Marsh Tit and The Willow Tit** Richard Broughton,2024-12-05 A superb account of the ecology and behaviour of two declining bird species whose lives are intimately shaped by their woodland habitats Rob Fuller There can surely be nobody else as richly qualified as Richard Broughton to write this definitive work on the natural history of these two fascinating species Prof Ben Sheldon The Marsh Tit and the Willow Tit are two small birds of woodlands and forests extending from Great Britain to Japan They are resourceful resilient vocal and bold Both species are an important part of our natural heritage and are sentinels of our wooded ecosystems sensitive to habitat changes that send their populations into decline and signalling problems in these precious habitats In this first monograph for either species Richard Broughton reveals the intricacies of the remarkable lives of these birds bringing together decades of personal study and a detailed review of the wider research from Europe and Asia We learn about each species taxonomy communication food and foraging patterns habitats social organisation breeding behaviour and dispersal as well as exploring the challenges they face and their future prospects With more than 150 illustrations including unique maps charts and colour photographs The Marsh Tit and The Willow Tit brings together a wealth of information surrounding these fascinating species and considers how we can better understand and conserve them

**Scottish Bird News** ,1996     *W Inging it* ,1999     Cuckoos, Cowbirds and Other Cheats Nick Davies,2010-09-30 This fascinating study describes the natural histories of these brood parasites and examines many of the exciting questions they raise about the evolution of cheating and the arms race between parasites and their prey Brood parasites fill their armoury with adaptations including exquisite egg mimicry rapid laying ejection of host eggs murder of host young chick mimicry and manipulative begging behaviour ploys shown by recent research to have evolved in response to host defence behaviour or through competition among the parasites themselves While many host species appear defenceless accepting parasite eggs quite unlike their own many are more discriminating against odd looking eggs and some have evolved the ability to discriminate against odd looking chicks as well How is this arms race conducted Will defenceless hosts develop defences in time or are there constraints which limit the evolution and perfection of host defences And why are so few species obliged only to lay eggs in host nests Have host defences limited the success of brood parasitism or is it in fact much more common than we suspect but occurring mainly when birds parasitize the nest of their own kind All of these puzzles are examined in descriptions of the natural history of each of the groups of parasites in turn Here is a book with wide appeal both to amateur

naturalists fascinated by this most singular and macabre of behaviours and by ornithologists and ecologists interested in the evolution of ecology and behaviour The story takes us from the classic field work by pioneer ornithologists such as Edgar Chance Stuart Baker Herbert Friedmann and others through to the experimental field work and molecular techniques of today s leading scientists We visit brood parasites in Europe Asia Japan Africa Australasia and North and South America to look at some of the world s most interesting birds and some of biology s most interesting questions many of which still beg answers from ornithologists in the future Brilliant illustrations by David Quinn illuminate the species discussed showing many behaviours never before illustrated and conveying the thrill of watching these astonishing birds in the wild
