ABSTRACT: A transnational capitalist class (TCC) has emerged as that segment of the world bourgeoisie that represents transnational capital, the owners of the leading worldwide means of production as embodied in the transnational corporations and private financial institutions. The spread of TNCs, the sharp increase in foreign direct investment, the proliferation of mergers and acquisitions across national borders, the rise of a global financial system, and the increased interlocking of positions within the global corporate structure, are some empirical indicators of the transnational integration of capitalists. The TCC manages global rather than national circuits of accumulation. This gives it an objective class existence and identity spatially and politically in the global system above any local territories and politics. The TCC became politicized from the 1970s into the 1990s and has pursued a class project of capitalist globalization institutionalized in an emergent trans-national state apparatus and in a “Third Way” political program. The emergent global capitalist historic bloc is divided over strategic issues of class rule and how to achieve regulatory order in the global economy. Contradictions within the ruling bloc open up new opportunities for emancipatory projects from global labor.

IT IS WIDELY RECOGNIZED THAT WORLD CAPITALISM has been undergoing a period of profound restructuring since the 1970s, bound up with the world historic process that has come to be known as globalization (Burbach and Robinson, 1999). One process central to capitalist globalization is transnational class formation, which has proceeded in step with the internationalization of capital and the global integration of national productive structures. Given the transnational integration of national economies, the mobility of capital and the global fragmentation and decentralization of accumulation circuits, class formation is progressively less tied to territoriality. The traditional assumption by Marxists that the capitalist class is by theoretical fiat organized in nation-states and driven by the dynamics of national capitalist competition and state rivalries needs to be modified.

We argue in this essay that a transnational capitalist class (hence-forth, TCC) has emerged, and that this TCC is a global ruling class. It is a ruling class because it controls the levers of an emergent trans-national state apparatus and of global decision making. This TCC is in the process of constructing a new global capitalist historic bloc: a new hegemonic bloc consisting of various economic and political forces that have become the dominant sector of the ruling class throughout the world, among the developed countries of the North as well as the countries of the South. The politics and policies of this ruling bloc are conditioned by the new global structure of accumulation and production.

This historic bloc is composed of the transnational corporations and financial institutions, the elites that manage the supranational economic planning agencies, major forces in the dominant

Birkbeck,2011-08-18 Discussion of the governance of global trade and the multilateral trading system is too often dominated by developed country scholars and opinion makers with inadequate attention given to developing country perspectives

corporations rule the world their interests seemingly taking precedence over states and their citizens Yet while states civil society and international organizations are well drawn in terms of their institutions ideologies and functions the world's global corporations are often more simply sketched as mechanisms of profit maximization In this book John Mikler recasts global corporations as political actors with complex identities and strategies Debunking the idea of global corporations as exclusively profit driven entities he shows how they seek not only to drive or modify the agendas of states but to govern in their own right He also explains why we need to re territorialize global corporations as political actors that reflect and project the political power of the states and regions from which they hail We know the global corporations names we know where they are headquartered and we know where they invest and operate Economic processes are increasingly produced by the control they possess the relationships they have the leverage they employ the strategic decisions they make and the discourses they create to enhance acceptance of their interests This book represents a call to study how they do so rather than making assumptions based on theoretical abstractions *Global Civil Society and Its Limits* G. Laxer,S.

Halperin,2003-04-30 This volume critically examines the promise of a global civil society Exploring issues in cases of diverse social justice movements the contributors show that a global civil society is still far from emerging and its promotion may even harm the realization of grassroots democracy The Internet is an exciting new means for activists to communicate internationally and citizens movements increasingly co ordinate campaigns through transnational advocacy networks but most effective civic action still takes place at national and local levels **International Law and World Order** B.
