

Virtual Tunnel Interface (VTI) Design Guide

This design guide is written for systems engineers and support engineers to provide guidelines and best practices for deploying virtual tunnel interfaces (VTIs).

This design guide defines the comprehensive functional components required to build an enterprise virtual private network (VPN) solution that can transport IP telephony and video. It identifies the individual hardware requirements and their interconnections, software features, management needs, and partner dependencies. This helps a customer deploy a manageable and maintainable enterprise VPN solution. It is assumed that the reader has a basic understanding of IP Security (IPsec).

This design guide is part of an ongoing series that addresses VPN solutions, using the latest VPN technologies from Cisco, and based on practical, tested designs.

A Virtual Reality Interface Design (VRID) Model and Methodology Tanriverdi. Vildan, 2001 Virtual reality VR interfaces need to support a richer variety and more complex types of human computer interactions objects behaviors and communications than those observed in conventional interfaces Therefore design and development of VR interfaces is a challenging process that is currently more of an art than a science There is need for design models and methodologies that can guide designers in a thinking comprehensively about the overall design of the VR interface b decomposing the design task into smaller conceptually distinct and easier tasks and c communicating the structure of the design to software developers In this dissertation we introduce a virtual reality interface design VRID model and an associated VRID methodology to guide design of virtual reality interfaces The VRID model aims to provide guidance to designers as to what they should be doing in the design and why while the VRID methodology provides procedural steps and guidelines as to how the design model can be applied methodically The model uses a multi component object architecture to help designers specify graphical features behaviors interactions and communication mechanisms of interface objects The methodology guides designers in generating design specifications at high and low levels of abstraction and facilitates iterations and refinements between the two levels until a conceptually sound and practically implementable design emerges
