Information Processing Nikil R. Pal, Nikola Kasabov, Rajani K. Mudi, Srimanta Pal, Swapan K. Parui, 2004-10-29 It is our great pleasure to welcome you to the 11th International Conference on Neural Information Processing ICONIP 2004 to be held in Calcutta ICONIP 2004 is organized jointly by the Indian Statistical Institute ISI and Jadavpur University JU We are confident that ICONIP 2004 like the previous conferences in this series will provide a forum for fruitful interaction and the exchange of ideas between the participants coming from all parts of the globe ICONIP 2004 covers all major facets of computational intelligence but of course with a primary emphasis on neural networks We are sure that this meeting will be enjoyable academically and otherwise We are thankful to the track chairs and the reviewers for extending their support in various forms to make a sound technical program Except for a few cases where we could get only two review reports each submitted paper was reviewed by at least three referees and in some cases the revised versions were

again checked by the referees. We had 470 submissions and it was not an easy task for us to select papers for a four day conference. Because of the limited duration of the conference based on the review reports we selected only about 40% of the contributed papers. Consequently it is possible that some good papers are left out. We again express our sincere thanks to all referees for accomplishing a great job. In addition to 186 contributed papers the proceedings includes two plenary presentations four invited talks and 18 papers in four special sessions. The proceedings is organized into 26 coherent topical groups. **Good Informatics Practices (GIP) Module: Validation & Verification** Frank Cicero, PMP, Jason Cooper, MS, Steven Fouskarinis, MBA, Kim Green, Barbara L Johnson, John Kim, Ben Larson, CSQE, Damian Gomez, CISSP, Linda Speake, Robert Sturm, MBA, Mark Vilivich, MS, CSM, Wen Wang, MS, CQA, CSQE, CQM/OE, Ford Winslow, 2011. **The Classroom Teacher's Survival Guide** Ronald L. This book provides insights into smart ways of computer log data analysis with the goal of spotting adversarial actions. It is organized into 3 major parts with a total of 8 chapters that include a detailed view on existing solutions as well as novel techniques that go far beyond state of the art. The first part of this book motivates the entire topic and highlights major challenges trends and design criteria for log data analysis approaches and further surveys and compares the state of the art. The second part of this book introduces concepts that apply character based rather than token based approaches and thus work on a more fine grained level. Furthermore these solutions were designed for online use not only forensic analysis but also process new log lines as they arrive in an efficient single pass manner. An advanced method for time series analysis aims at detecting changes in the overall behavior profile of an observed system and spotting trends and periodicities through log analysis. The third part of this book introduces the design of the AMiner which is an advanced open source component for log data anomaly mining. The AMiner comes with several detectors to spot new events new parameters new correlations new values and unknown value combinations and can run as stand alone solution or as sensor with connection to a SIEM solution. More advanced detectors help to determine the characteristics of variable parts

of log lines specifically the properties of numerical and categorical fields Detailed examples throughout this book allow the reader to better understand and apply the introduced techniques with open source software Step by step instructions help to get familiar with the concepts and to better comprehend their inner mechanisms A log test data set is available as free download and enables the reader to get the system up and running in no time This book is designed for researchers working in the field of cyber security and specifically system monitoring anomaly detection and intrusion detection The content of this book will be particularly useful for advanced level students studying computer science computer technology and information systems Forward thinking practitioners who would benefit from becoming familiar with the advanced anomaly detection methods will also be interested in this book
