Central and Southern Florida Project United States. Office of the Assistant Secretary of the Army (Civil Works),2012 Handbook of Engineering Acoustics Gerhard Müller,Michael Möser,2012-11-06 This book examines the physical background of engineering acoustics focusing on empirically obtained engineering experience as well as on measurement techniques and engineering methods for prognostics Its goal is not only to describe the state of art of engineering acoustics but also to give practical help to engineers in order to solve acoustic problems It deals with the origin the transmission and the methods of the abating different kinds of air borne and structure borne sounds caused by various mechanisms from traffic to machinery and flow induced sound In addition the modern aspects of room and building acoustics as well as psychoacoustics and active noise control are covered *Noise Control Manual* David A. Harris,2013-03-09 Excessive noise

levels are generally acknowledged to have adverse effects on our environment Studies indicate that excessive noise levels can cause fatigue in exposed individuals lower efficiency and productivity impaired speech communication and hearing loss Excessive noise is almost everywhere today in the office in schools hospitals and other institutional facilities in all classes of public buildings and in our factories INDUSTRIAL NOISE High noise levels in factories can make speech communication in the plant difficult and at times impossible Foremen are often unable to hear warning shouts from co workers The problem of hearing loss due to excessive noise exposure is of particular concern to industry and to the federal government In the early 1970s the United States Congress passed the Occupational Safety and Health Act OSHA which sets criteria for health hazards and established limits for noise exposure of industrial workers The OSHA Noise Standard was amended in 1982 to require audiometric testing of all employees exposed to noise levels of 85 dB or above for eight hours A NOISE IN COMMERCIAL AND INSTITUTIONAL BUILDINGS While noise levels in offices stores schools and other commercial and institutional buildings seldom reach those encountered in many industrial environments they often reach levels which are distracting to the occupants of such buildings Impairment of speech communication among workers or inversely the lack of speech privacy are both deterrents to efficiency and productivity and are detrimental to the occupants comfort and sense of well being
