Mechatronics by Bond Graphs Vjekoslav Damic, John Montgomery, 2016-01-14 This book presents a computer aided approach to the design of mechatronic systems Its subject is an integrated modeling and simulation in a visual computer environment Since the first edition the simulation software changed enormously became more user friendly and easier to use Therefore a second edition became necessary taking these improvements into account The modeling is based on system top down and bottom up approach The mathematical models are generated in a form of differential algebraic equations and solved using numerical and symbolic algebra methods The integrated approach developed is applied to mechanical electrical and control systems multibody dynamics and continuous systems

Modelling and Simulation of Power Generation Plants Andrzej W. Ordys, A.W. Pike, Michael A Johnson, Reza M. Katebi, Michael J. Grimble, 2012-12-06 Many large scale processes like refineries or power generation plant are constructed using the multi vendor system and a main co ordinating engineering contractor With such a methodology the key process units are installed complete with local proprietary control systems in place Re assessing the so called lower level control loop design or structure is becoming less feasible or desirable Consequently future competitive gains in large scale industrial systems will arise from the closer and optimised global integration of the process sub units This is one of the inherent

commercial themes which motivated the research reported in this monograph To access the efficiency and feasibility of different large scale system designs the traditional tool has been the global steady state analysis and energy balance The process industries have many such tools encapsulated as proprietary design software However to obtain a vital and critical insight into global process operation a dynamic model and simulation is necessary Over the last decade the whole state of the art in system simulation has irrevocably changed The Graphical User Interface GUI and icon based simulation approach is now standard with hardware platforms becoming more and more powerful This immediately opens the way to some new and advanced large scale dynamic simulation developments For example click together blocks from standard or specialised libraries of process units are perfectly feasible now
