Fun Projects for the Experimenter - volume 2 Newton C. Braga,2015-04-28 During more than 30 years as a collaborator with American European and Latin American electronics magazines has published a large assortment of practical circuits using common parts In 1999 he included the first selection in a volume published by Prompt Publications in USA The idea was to proceed with the series publishing many volumes more But Prompt closed his activities and the idea was forgotten although the first volume became a best seller Now with his own publishing house NCB Publications the author returned

with the idea of make many volumes more of the series So the second volume is here proceeding with the same idea give simple projects to the experimenters who want learn electronics using common parts and with no need of special knowledge about electronics So as in the first volume many of the projects collected by the author are included in this volume most of which you can build in one evening The projects range from fun types through practical types to amusement types Of course there are other devices that can be used to teach you something about circuits and components An important feature of theses projects are the ideas to Explore intended for students looking for projects in science or to use in practical research This ideal can be complemented by our book Science Fair and Technology Education Projects also published in English by the author We can consider this book as a source book of the easiest and fun to make of hundreds of projects created and published by the author during his life see more about Newton C Braga in about the author in his site **110 Waveform**

Generator Projects for the Home Constructor R. M. Marston, 2016-03-16 110 Waveform Generator Projects for the Home Constructor deals with waveform generator circuits that can produce forms of sine square triangle sawtooth ramp pulse or staircase The generator circuits built by the constructor using transistors operational amplifiers or digital integrated circuits can produce modulated or unmodulated outputs with single or multiple form outputs The constructor must follow two requirements in building a simple sine wave oscillator firstly the output of an amplifying device must be fed back to its input via a frequency selective network in such a way that the sum of the amplifier and feedback network phase shifts equals zero or 360 degrees at the desired oscillation frequency Secondly the gain of the amplifying device must exactly counter the loss or attenuation of the frequency selective feedback network at the desired oscillation frequency to give an overall system gain of precise unity The book also describes different waveform modulations such as amplitude modulation a m frequency modulation f m frequency shift keying f s k phase shift keying p s k sweep modulation carrier keying and how to apply these in practical circuits Radio technicians engineers apprentices hobbyists and students of electrical engineering or electronics will find the book very useful
