Google SketchUp for Game Design Robin De Jongh, 2011-11-25 Annotation Creating video game environments similar to the best 3D games on the market is now within the capability of hobbyists for the first time with the free availability of game development software such as Unity 3D and the ease with which groups of enthusiasts can get together to pool their skills for a game project The sheer number of these independent game projects springing up means there is a constant need for game art the physical 3D environment and objects that inhabit these game worlds Now thanks to Google there is an easy fun way to create professional game art levels and props Google SketchUp is the natural choice for beginners to game design This book provides you with the workflow to quickly build realistic 3D environments levels and props to fill your game world In simple steps you will model terrain buildings vehicles and much more Google SketchUp is the ideal entry level modeling tool for game design allowing you to take digital photographs and turn them into 3D objects for quick fun game creation

SketchUp for Game Design takes you through the modeling of a game level with SketchUp and Unity 3D complete with all game art textures and props You will learn how to create cars buildings terrain tools and standard level props such as barrels fencing and wooden pallets You will set up your game level in Unity 3D to create a fully functional first person walk around level to email to your friends or future employers When you have completed the projects in this book you will be comfortable creating 3D worlds whether for games visualization or films

Energy Efficiency in Buildings José Manuel Andújar, Sergio Gómez Melgar, 2020-04-28 Buildings are one of the main causes of the emission of greenhouse gases in the world Europe alone is responsible for more than 30% of emissions or about 900 million tons of CO<sub>2</sub> per year Heating and air conditioning are the main cause of greenhouse gas emissions in buildings Most buildings currently in use were built with poor energy efficiency criteria or depending on the country and the date of construction none at all Therefore regardless of whether construction regulations are becoming stricter the real challenge nowadays is the energy rehabilitation of existing buildings It is currently a priority to reduce or ideally eliminate the waste of energy in buildings and at the same time supply the necessary energy through renewable sources The first can be achieved by improving the architectural design construction methods and materials used as well as the efficiency of the facilities and systems the second can be achieved through the integration of renewable energy wind solar geothermal etc in buildings In any case regardless of whether the energy used is renewable or not the efficiency must always be taken into account The most profitable and clean energy is that which is not consumed
