

Plate Tectonics Review Questions

14. What is the situation at the San Andreas Fault?

San Andreas Fault is Located in California where the North American and Pacific Plate interact. The Pacific Plate is moving faster to Northwest sliding past the North American Plate. This causes earthquakes in California.

15. What are the three possible types of convergences that can occur when two tectonics plate collide with one another?

- a. Oceanic-Oceanic b. Oceanic-Continental c. Continental-Continental

16. Complete the following chart...

Boundary	Type of Crust	Resulting Feature	Examples
Divergent	Oceanic-Oceanic	Mid-Ocean Ridge	Mid Atlantic Ridge East Pacific Ridge
	Continental-Continental	Rift Valley	Iceland East African Rift
Convergent	Oceanic-Continental	Ocean Trench Volcanic Mountains	Peru-Chile Trench Andes Mt.
	Oceanic-Oceanic	Ocean Trench Volcanic Island Arc.	Marianas Trench Japan Caribbean Islands
	Continental-Continental	Mountain Range	Appalachian Mt. Himalayan Mt.
Transform	Continental-Continental	Strike Slip Fault	San Andreas Fault
	Oceanic-Oceanic	Fracture Zone	Mid – Atlantic Ridge Fracture Zone

17. How would the behavior of two plates that are said to be along a convergent boundary best be described?

The plates are colliding and moving together, if one plate is more dense than the other subduction will also occur allowing one plate to slip underneath of another.

18. During Oceanic-continental convergence, which plate sinks into the mantle? Why does it do this?

The oceanic plate will sink into the mantle because ocean crust is more dense than continental crust.

19. Define the word "Subduction."

Subduction refers to the movement of one plate below another due to differences in density. The more dense plate will sink into the mantle and the less dense plate will float overtop.

20. Explain how oceanic-oceanic convergence differs from oceanic-continental convergence.

Both convergences produce similar features, however, each will produce a different type of volcano. The oceanic to oceanic produce volcanic island arcs, while the oceanic-continental will produce volcanic mountain ranges each with a different type of magma.
