Abnormal and clinical psychology courses are offered in psychology programs at universities worldwide, but the most recent major encyclopedia on the topic was published many years ago. Although general psychology handbooks and encyclopedias include essays on abnormal and clinical psychology, such works do not provide students with an accessible reference for understanding the full scope of the field. *The SAGE Encyclopedia of Abnormal and Clinical Psychology*, a 7-volume A-Z work in print and electronic formats, is such an authoritative work. Its more than 1,400 entries provide information on fundamental approaches and theories, various mental health disorders, assessment tools, and psychotherapeutic interventions, and the social, legal, and cultural frameworks that have contributed to debates in abnormal and clinical psychology. Key features include 1,400 signed articles contained in 7 volumes and available in choice of print and/or electronic formats. Although organized A to Z, the front matter includes a Reader's Guide grouping related entries thematically. Back matter includes a Chronology, Resource Guide, Bibliography, and detailed Index. Entries conclude with References, Further Readings, and Cross-References to related entries. The Index, Reader's Guide, themes, and Cross-References between and among entries all combine to provide robust search and browse features in the electronic version.

Brief Treatments for the Traumatized Charles R. Figley, 2002-09-30. Trauma is now being recognized as a major mental health challenge with clients from children to the elderly presenting symptoms of Post-Traumatic Stress Disorder, often with no awareness of the cause. Yet, managed care and the growing incidence of trauma patients presenting increased demands on existing professionals requires brief treatments whenever possible. This book explains how to apply brief, existing, generic treatments to help manage the traumatized and diminish or eliminate their traumatic symptoms. These

recommended brief treatments are guided by sound assessment methods that can be verified empirically. The treatment chapters provide detailed information for the practitioner including ways to incorporate the treatment approach into an overall plan. The volume will be helpful to practitioners who work exclusively with traumatized clients as well as those who are only occasionally presented with such cases.

Self-Injurious Behaviors Daphne Simeon, Eric Hollander, 2008-11-01

Throughout history people have invented many different ways to inflict direct and deliberate physical injury on themselves without an intent to die. Even today the concept and practice of self injury is sanctioned by some cultures although condemned by most. This insightful work fills a gap in the literature on pathologic self injury. The phenomenon of people physically hurting themselves is heterogeneous in nature, disturbing in its impact on the self and others, frightening in its blatant maladaptiveness, and often indicative of serious developmental disturbances, breaks with reality, or deficits in the regulation of affects, aggressive impulses, or self states. Further complicating our understanding is the large and diverse scope of psychiatric conditions such as pervasive developmental disorders, Tourette's syndrome, and psychosis in which these behaviors occur. This volume presents a comprehensive nosology of self-injurious behaviors, classifying them as stereotypic, major, compulsive, and impulsive, with greater emphasis on the last two categories because they are the most commonly seen. The chapter on stereotypic self-injurious behaviors, highly repetitive, monotonous behaviors usually devoid of meaning such as head banging, focuses on the neurochemical systems underlying the various forms of stereotypic movement disorders with self-injurious behaviors typically seen in patients with mental retardation and autism and discusses their psychopharmacological management. The chapter on psychotic or major self-injurious behaviors, severe life-threatening behaviors such as castration, presents a multidimensional approach to evaluating and treating patients with psychosis and self-injurious behaviors, including the neuroanatomy and neurobiology of sensory information processing as background for its discussion of neurobiological studies and psychopharmacological treatments. Chapters on the neurobiology of and psychopharmacology and psychotherapies for compulsive self-injurious behaviors, repetitive ritualistic behaviors such as trichotillomania, hair pulling, offer much needed biological research and the first empirical treatment studies on compulsive self-injurious behaviors and argue that a distinction can indeed be made between compulsive and impulsive self-injurious behaviors. Chapters on the neurobiology, psychopharmacology, and dialectic behavior and psychodynamic theory and treatment of impulsive self-injurious behaviors, habitual chronic behaviors such as skin picking, supplement the few neurobiological studies measuring impulsivity, aggression, dissociation, and suicide, and detail the efficacy of various medications and psychotherapies. An eminently practical guide with exhaustive references to the latest data and research findings, this concise volume contains clinical material and therapeutic interventions that can be used right away by clinicians to better understand and treat patients with these complex and disturbing behaviors.
