The Nervous System

The nervous system is an extremely complex, highly intricate, and very sensitive structure that regulates everything that happens throughout the human body. The main purpose of all the nervous system and its various parts is to carry and send information, and give the body control over its movements. The nervous system is basically made of two systems: the central nervous system (CNS) and the peripheral nervous system (PNS).

Central Nervous System

The central nervous system, or CNS, is made up of the brain and spinal cord. The brain is the most important part of the nervous system. It is located in the head and is the control center of the body. It is made up of billions of neurons that are connected to each other. The brain is divided into two main parts: the cerebrum and the cerebellum. The cerebrum is the part of the brain that is responsible for most of the body's functions, including thinking, feeling, and controlling the body's movements. The cerebellum is the part of the brain that is responsible for coordination and balance. The spinal cord is a long, thin, tube-like structure that runs down the back. It is made up of many small, individual segments called vertebrae. The spinal cord is responsible for carrying messages between the brain and the rest of the body.

Peripheral Nervous System

There are all parts of the nervous system that are not part of the CNS, and they make up the peripheral nervous system (PNS). The PNS is made up of all the nerves that are outside the brain and spinal cord. These nerves are responsible for carrying messages between the CNS and the rest of the body. The PNS is divided into two main parts: the somatic nervous system and the autonomic nervous system. The somatic nervous system is responsible for controlling the body's voluntary movements, such as walking, talking, and thinking. The autonomic nervous system is responsible for controlling the body's involuntary functions, such as heart rate, breathing, and digestion.

The PNS is also divided into two main parts: the afferent nervous system and the efferent nervous system. The afferent nervous system is responsible for carrying messages from the body to the CNS. The efferent nervous system is responsible for carrying messages from the CNS to the body. The PNS is also divided into two main parts: the somatic nervous system and the autonomic nervous system. The somatic nervous system is responsible for controlling the body's voluntary movements, such as walking, talking, and thinking. The autonomic nervous system is responsible for controlling the body's involuntary functions, such as heart rate, breathing, and digestion.
