Translation Solutions for Many Languages Anthony Pym,2016-04-21 Many translation solutions often called procedures

techniques or strategies have been proposed over the past 50 years or so in French Chinese Russian Ukrainian English Spanish German Japanese Italian Czech and Slovak This book analyzes criticizes and compares them proposing a new list of solutions that can be used in training translators to work between many languages The book also traces out an entirely new history of contemporary translation studies showing for example how the Russian tradition was adapted in China how the impact of transformational linguistics was resisted and how scholarship has developed an intercultural metalanguage over and above the concerns of specific national languages The book reveals the intensely political nature of translation theory even in its most apparently technical aspects The lists were used to advance the agendas of not just linguistic nationalisms but also state regimes this is a history in which Hitler Stalin and Mao all played roles Communist propaganda and imperialist evangelism were both legitimized Ukrainian advances in translation theory were forcefully silenced in the 1930s the Cold War both stimulated the application of transformational grammar and blocked news of Russian translation theory French translation theory was conscripted into the agenda of Japanese exceptionalism and much else *Tagore beyond Borders*

Multilingual Information Retrieval Carol Peters, Martin Braschler, Paul Clough, 2012-01-05 We are living in a multilingual world and the diversity in languages which are used to interact with information access systems has generated a wide variety of challenges to be addressed by computer and information scientists The growing amount of non English information accessible globally and the increased worldwide exposure of enterprises also necessitates the adaptation of Information Retrieval IR methods to new multilingual settings Peters Braschler and Clough present a comprehensive description of the technologies involved in designing and developing systems for Multilingual Information Retrieval MLIR They provide readers with broad coverage of the various issues involved in creating systems to make accessible digitally stored materials regardless of the language s they are written in Details on Cross Language Information Retrieval CLIR are also covered that help readers to understand how to develop retrieval systems that cross language boundaries Their work is divided into six chapters and accompanies the reader step by step through the various stages involved in building using and

evaluating MLIR systems The book concludes with some examples of recent applications that utilise MLIR technologies Some of the techniques described have recently started to appear in commercial search systems while others have the potential to be part of future incarnations The book is intended for graduate students scholars and practitioners with a basic understanding of classical text retrieval methods It offers guidelines and information on all aspects that need to be taken into consideration when building MLIR systems while avoiding too many hands on details that could rapidly become obsolete Thus it bridges the gap between the material covered by most of the classical IR textbooks and the novel requirements related to the acquisition and dissemination of information in whatever language it is stored **Next Generation Search**
