Managing Government Employees is a go to guide to empower leaders improve employee performance and help you meet daily challenges with energy and efficiency *Managing Creativity in Science and Hi-Tech* Ronald Kay, 2012-12-06

The growing role of science and technology in modern society has generated a need for unique management skills on the part of scientists and engineers While this need is widely recognized there is little agreement on the most appropriate way in which it should be satisfied The general literature on management does not usually recognize the problems that are unique to those engaged in science and high technology This lack is also reflected in the considerable variety of formal management training which more often than not has missed its mark at least when judged by the response of participating scientists and engineers My recent experience teaching graduate students and practicing scientists and engineers about those aspects of management that are likely to be most relevant to their future endeavors has been the principle motivation for this book The book reflects some of what I have learned from that experience and has been further encouraged by the convictions that

- 1 the distribution of management potential among engineers and scientists is no different from that of other groups with comparable academic achievement
- 2 successfully managed scientific and technical enterprise provides the most useful source of learning and
- 3 the process of learning is facilitated by referring to the experience that has proven effective in creating an environment in which scientific and technical enterprise has flourished
