The Origins Of Religion In The Paleolithic:

The Origins of Religion in the Paleolithic, 2015 The Origins of Religion in the Paleolithic G. J. Wightman, 2015

How did religion emerge and why? What are the links between behavior, environment and religiosity? Diving millions of years into the past to a time when human ancestors began grappling with issues of safety, worth, identity, loss, power and meaning in complex and difficult environments, Gregory J. Wightman explores the significance of goal-directed action and the rise of material culture for the advent of religiosity and ritual. The book opens by tackling questions of cognitive evolution and group psychology and how these ideas can integrate with archaeological evidence such as stone tools, shell beads and graves. In turn, it focuses on how human ancestors engaged with their environments, how those engagements became routine and how eventually certain routines took on a recognizably ritualistic flavor. Wightman also critically examines the very real constraints on drawing inferences about prehistoric belief systems solely from limited material residues. Nevertheless, Wightman argues that symbolic objects are not merely illustrative of religion but also constitutive of it in the continual dance between brain and behavior between internal and external environments lie the seeds of ritual and religion. Weaving together insights from archaeology, anthropology, cognitive and cultural neuroscience, history and philosophy of religions and evolutionary social and developmental psychology, Wightman provides an intricate, evidence-based understanding of religion's earliest origins. History and the Study of Religion Stanley Stowers,2024 How does one understand religion Can one explain religion How does one understand the craft and discipline of the historian How can one best bring together the study of religion with the craft and discipline of the historian I am a historian who works in the study of religion and believe that the present intellectual moment offers enormous in some ways unprecedented opportunities both in the study of religion and historiography But at the same time difficulties and dangers loom together with the opportunities My specialty and prime set of examples lie in the study of ancient Mediterranean religion if indeed there is something that can rightly be called Mediterranean religion or even called religion Many specialists in the study of religion and also many of those who study ancient cultures doubt or even reject outright religion as a cross historical category on the one hand and on the other anything common about religion across the ancient Mediterranean And some cognitive scientists who against religion specialists have argued for the centrality of gods to religion then agree with the skeptics that religion is not a coherent social object a social kind I will argue that long discredited forms of anti realism and untenable anthropocentrism haunt both

groups Among other areas I work in Christianity and Judaism Do they belong to Mediterranean religion One can easily see how coming to an understanding of what religion is and what Mediterranean religion is form key questions I will argue that religion is a robust realistic entity a social kind and that ancient Mediterranean religion even with all of its great diversity operated with some key common principles It is no secret that Christianity and Judaism have presented themselves as unique and essentially untouched by an inferior and degenerate religiosity that characterized everyone else in the Mediterranean History looks different when one dispenses with such normatively heavy freight and situates the two within rather than outside of Mediterranean religion *The Origins of Religions* Julien Ries,1994 *The Origins of Religions* opens with a look at prehistoric man s first steps on the planet then moves on to examine the cultic rituals artistic expression and expanding mythology that developed throughout the Paleolithic and Neolithic epochs Teaching Big History Richard B. Simon,Mojgan Behmand,Thomas Burke,2015 *Big History* is a new field on a grand scale it tells the story of the universe over time through a diverse range of disciplines that spans cosmology physics chemistry astronomy geology evolutionary biology anthropology and archaeology thereby reconciling traditional human history with environmental geography and natural history Weaving the myriad threads of evidence based human knowledge into a master narrative that stretches from the beginning of the universe to the present the *Big History* framework helps students make sense of their studies in all disciplines by illuminating the structures that underlie the universe and the connections among them *Teaching Big History* is a powerful analytic and pedagogical resource and serves as a comprehensive guide for teaching *Big History* as well for sharing ideas about the subject and planning a curriculum around it Readers are also given helpful advice about the administrative and organizational challenges of instituting a general education program constructed around *Big History* The book includes teaching materials examples and detailed sample exercises This book is also an engaging first hand account of how a group of professors built an entire *Big History* general education curriculum for first year students demonstrating how this thoughtful integration of disciplines exemplifies liberal education at its best and illustrating how teaching and learning this incredible story can be transformative for professors and students alike
