

Math Lesson Plan #9

Touch Math

Introduction:

Did you ever wonder if there was an easy way to add many numbers together? Most people use their fingers to count. And over the years many people have discovered different ways to do math. Touch math is another way to add numbers. Using darkened circles we can learn an easy way to add numbers one through five. The number six through nine has a way but the best ones to really know is the number one through five.

Objectives:

In this lesson, students will:

- The student will be able to use touch math to add numbers one through nine.
- The student will be able to read a graph and determine which amount of money to use to make the required words.
- The students will be able to add the letters (amount of money) together to get a price.

Session time:

Approximately one hour.

Materials:

- Large poster of the Touch Math worksheet
- Touch Math worksheet
- Dollars & Cents worksheet
- Pencils and scrap paper

Methods:

Can be done as a group activity or individual work

Procedures:

- 1) Using the poster or overhead to demonstrate how to add numbers by using the dots on the numbers one through five. Closed circles are counted once and open ones are counted twice.
- 2) Explain that the numbers six through nine can be counted but it is easier to pick the larger number in a problem to start you counting. For example, if you have $7 + 4$, you would start counting after seven.
- 3) Give students approximately 10 minutes to do the Touch Math worksheet for practice.

Beckmann, Denisse R. Thompson, Rheta N. Rubenstein, 2009-11-02 Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their college and career options Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics content and mathematics pedagogy i.e. teaching strategies but

they also need to know how these ideas are integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many other texts that you have used It integrates both content and pedagogy to help you develop and build your own understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career Hopefully you will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1 1 and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and learning elements and strategies and incorporate these elements as they plan additional lesson segments In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans

(Re)Designing Programs: Jennifer Jacobs, Rebecca West Burns, 2021-04-01 Given the increasing diversity of the United States and students entering schools, the value of teacher learning in clinical contexts and the need to elevate the profession, national organizations have been calling for a re-envisioning of teacher preparation that turns teacher education upside down. This change will require PK-12 schools and universities to partner in robust ways to create strong professional learning experiences for aspiring teachers. University faculty in particular will not only need to work in schools but they will need to work with schools in the preparation of future teachers. This collaboration should promote greater equity and justice for our nation's students. The purpose of this book is to support individuals in designing clinically based teacher preparation programs that place equity at the core. Drawing from the literature as well as our experiences in designing and coordinating award-winning teacher education programs, we offer a vision for equity-centered, clinically based preparation that promotes powerful teacher professional learning and develops high-quality equity-centered teachers for schools. The chapter topics include: policy guidelines, partnerships, intentional clinical experiences, coherence, curriculum and coursework, university-based teacher educators, school-based teacher educators, teacher candidate supervision and evaluation, the role of research and instructional leadership in teacher preparation. While the concepts we share are research-based and grounded in the empirical literature, our primary intention is for this book to be of practical use. We hope that by the time you finish reading, you will feel inspired and equipped to make change within your own program, your institution, and your local context. We begin each chapter with a 'Before You Read' section that includes introductory activities or self-assessment questions to prompt reflection about the current state of your teacher preparation program. We also weave examples of a 'Spotlight from Practice' in the form of vignettes designed to spark your thinking for program improvement. Finally, we conclude each chapter with a section called 'Exercises for Action' which are questions or activities to help you re-imagine and move toward action in the re-design of your teacher preparation program. We hope that you will use the exercises by yourself but perhaps more importantly with others to stimulate conversations about how you can build upon what you are already doing well to make your program even better.
